

A: Datasheet

Algorithm: icm_001

Developer: ICM Airport Technics

Submission Date: 2023_12_12

Template size: 2048 bytes

Template time (2.5 percentile): 158 msec

Template time (median): 164 msec

Template time (97.5 percentile): 174 msec

Investigation:

Frontal mugshot ranking 215 (out of 470) -- FNIR(1600000, 0, 1) = 0.0031 vs. lowest 0.0008 from intema_001

Mugshot webcam ranking 207 (out of 432) -- FNIR(1600000, 0, 1) = 0.0160 vs. lowest 0.0054 from sensetime_009

Mugshot profile ranking 200 (out of 401) -- FNIR(1600000, 0, 1) = 0.3822 vs. lowest 0.0510 from nec_009

Immigration visa-border ranking 182 (out of 359) -- FNIR(1600000, 0, 1) = 0.0050 vs. lowest 0.0006 from cloudwalk_mt_002

Immigration visa-kiosk ranking 191 (out of 303) -- FNIR(1600000, 0, 1) = 0.1025 vs. lowest 0.0387 from cloudwalk_mt_002

Identification:

Frontal mugshot ranking 216 (out of 470) -- FNIR(1600000, T, L+1) = 0.0290, FPIR=0.001000 vs. lowest 0.0011 from idemia_010

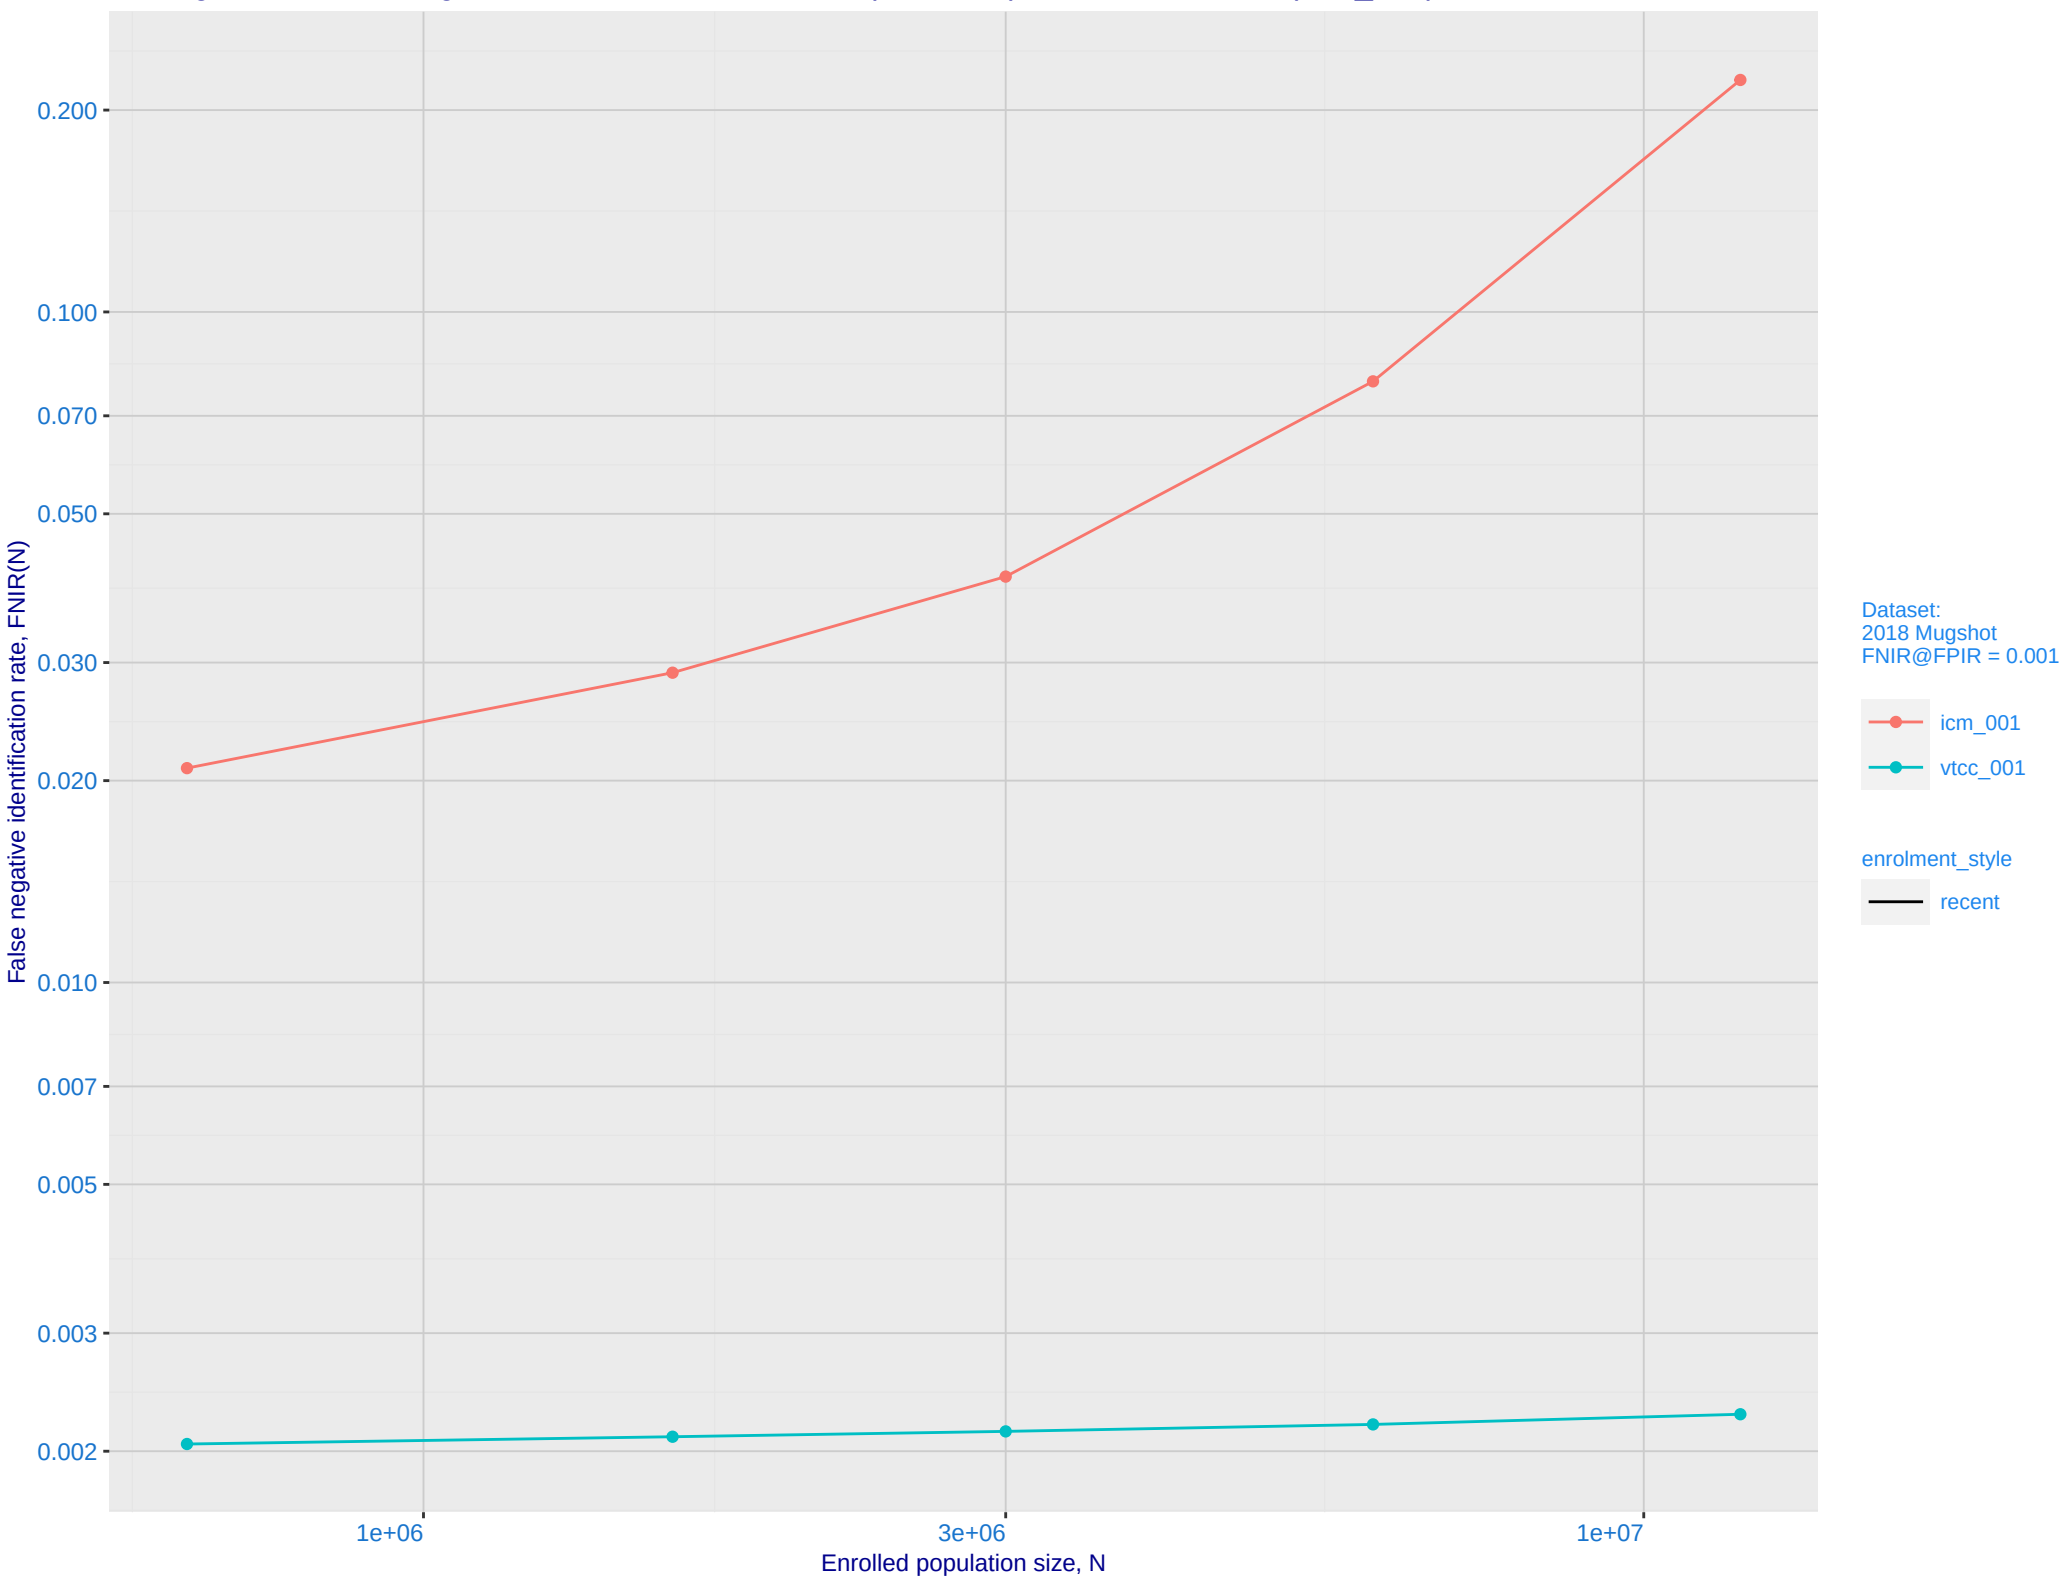

Mugshot webcam ranking 313 (out of 430) -- FNIR(1600000, T, L+1) = 0.2506, FPIR=0.001000 vs. lowest 0.0071 from nec_009

Mugshot profile ranking 330 (out of 400) -- FNIR(1600000, T, L+1) = 0.9998, FPIR=0.001000 vs. lowest 0.0634 from cloudwalk_mt_002

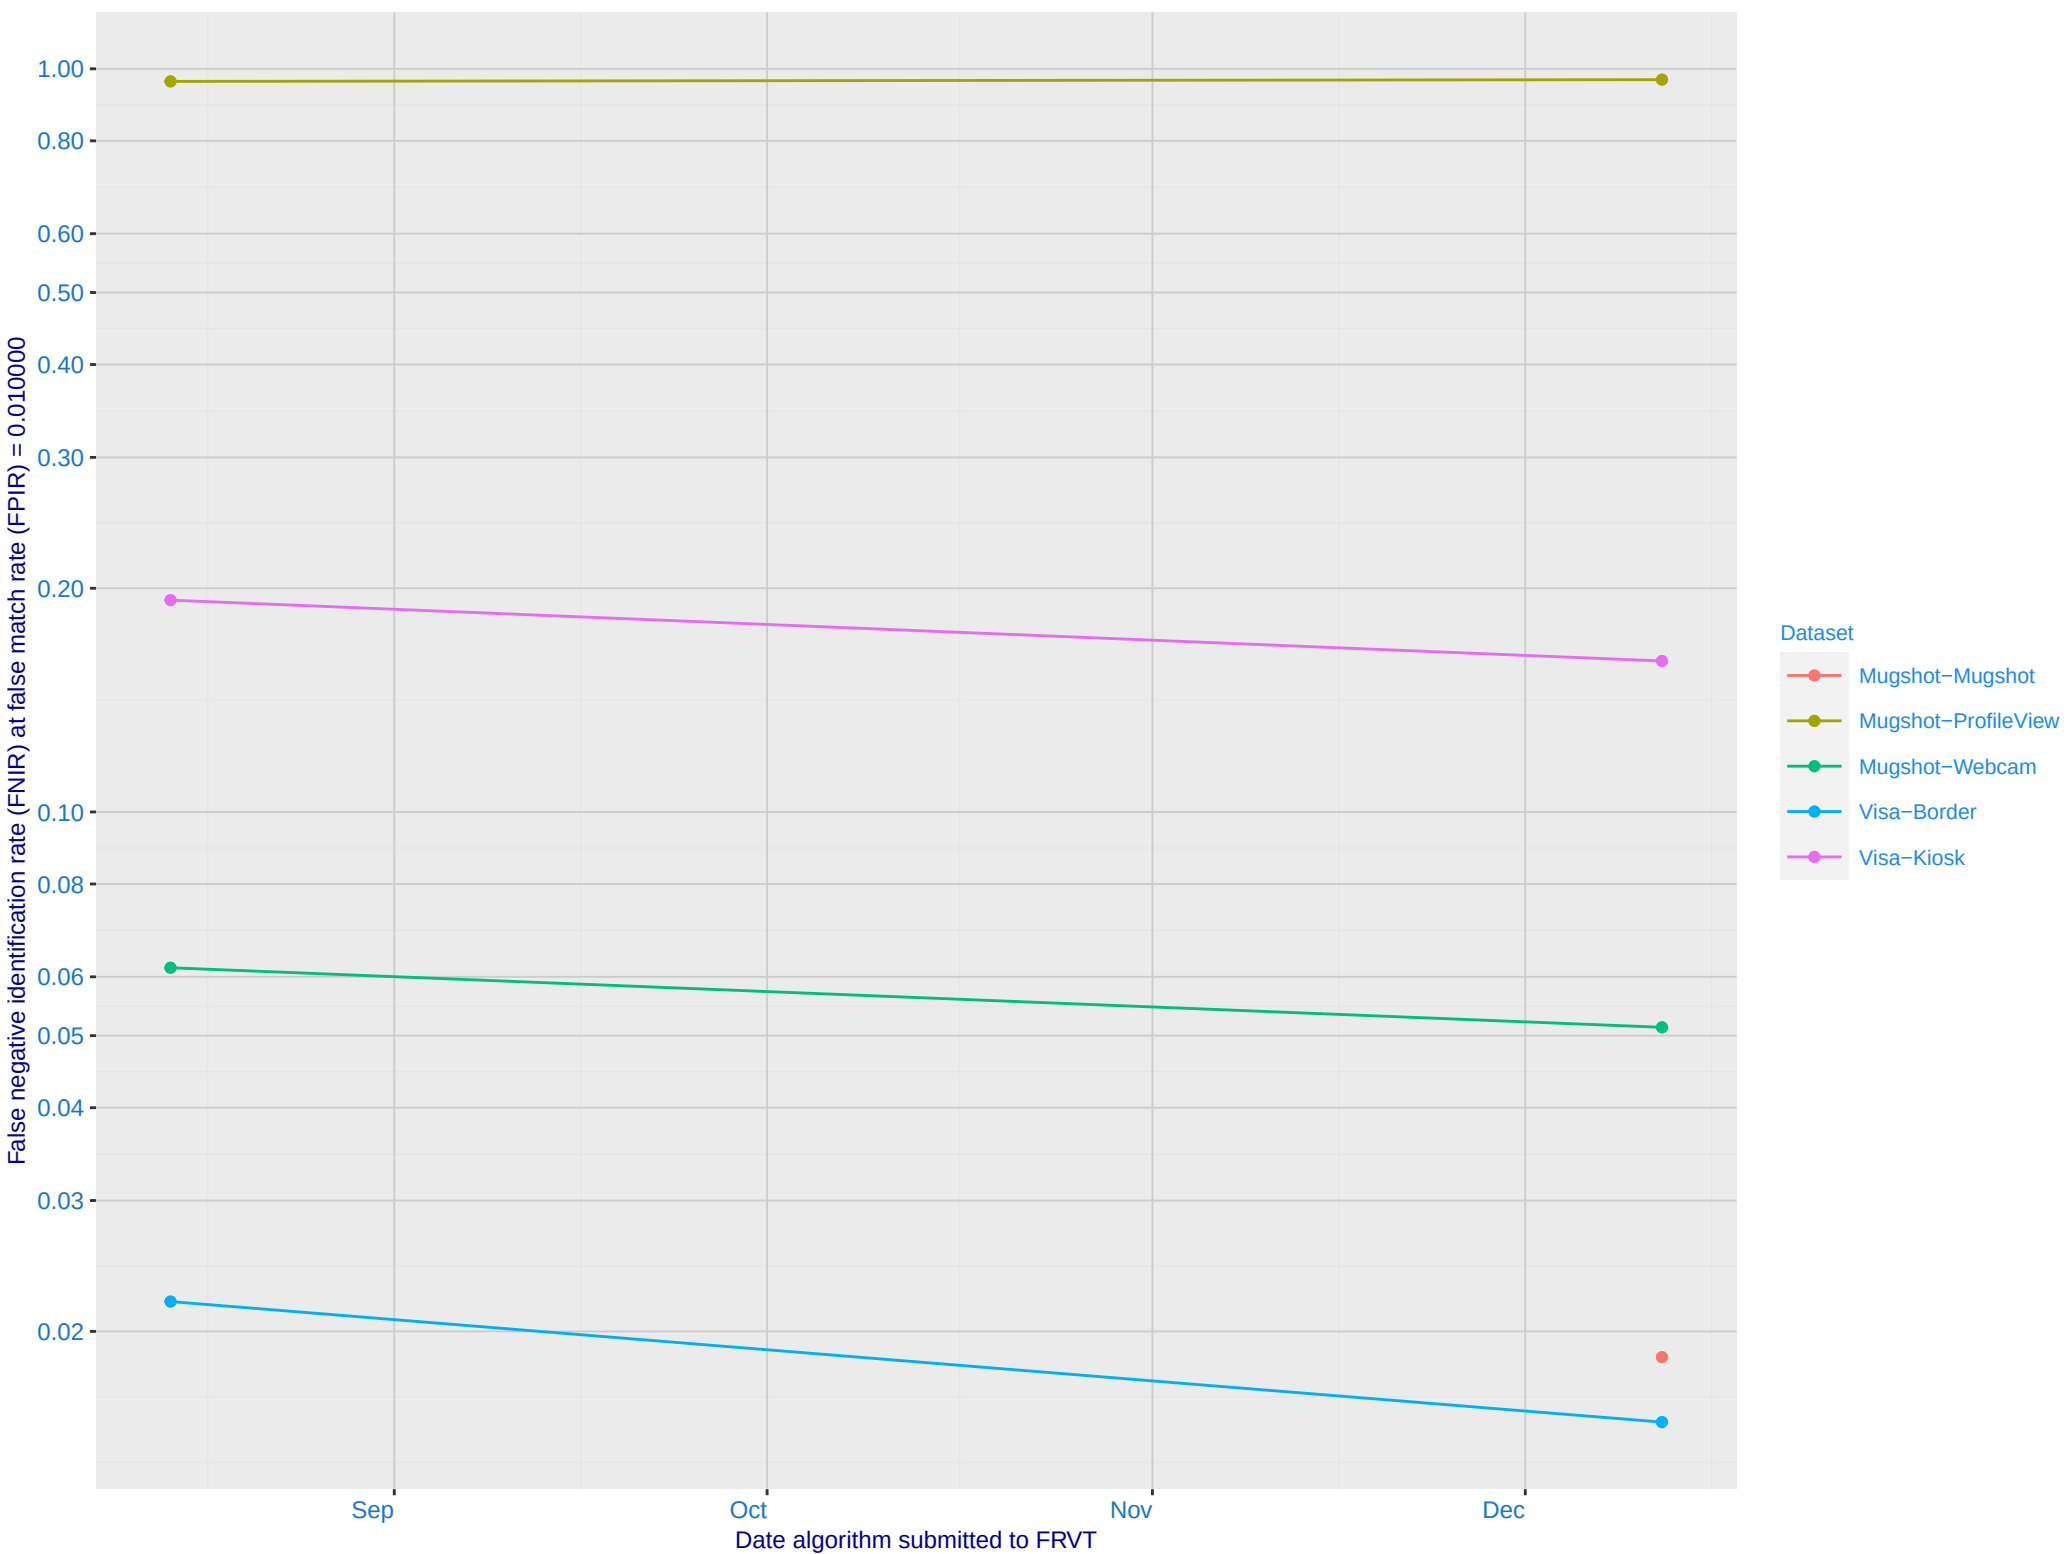

Immigration visa-border ranking 277 (out of 358) -- FNIR(1600000, T, L+1) = 0.3068, FPIR=0.001000 vs. lowest 0.0010 from cloudwalk_mt_002

Immigration visa-kiosk ranking 248 (out of 303) -- FNIR(1600000, T, L+1) = 0.8470, FPIR=0.001000 vs. lowest 0.0485 from nec_009

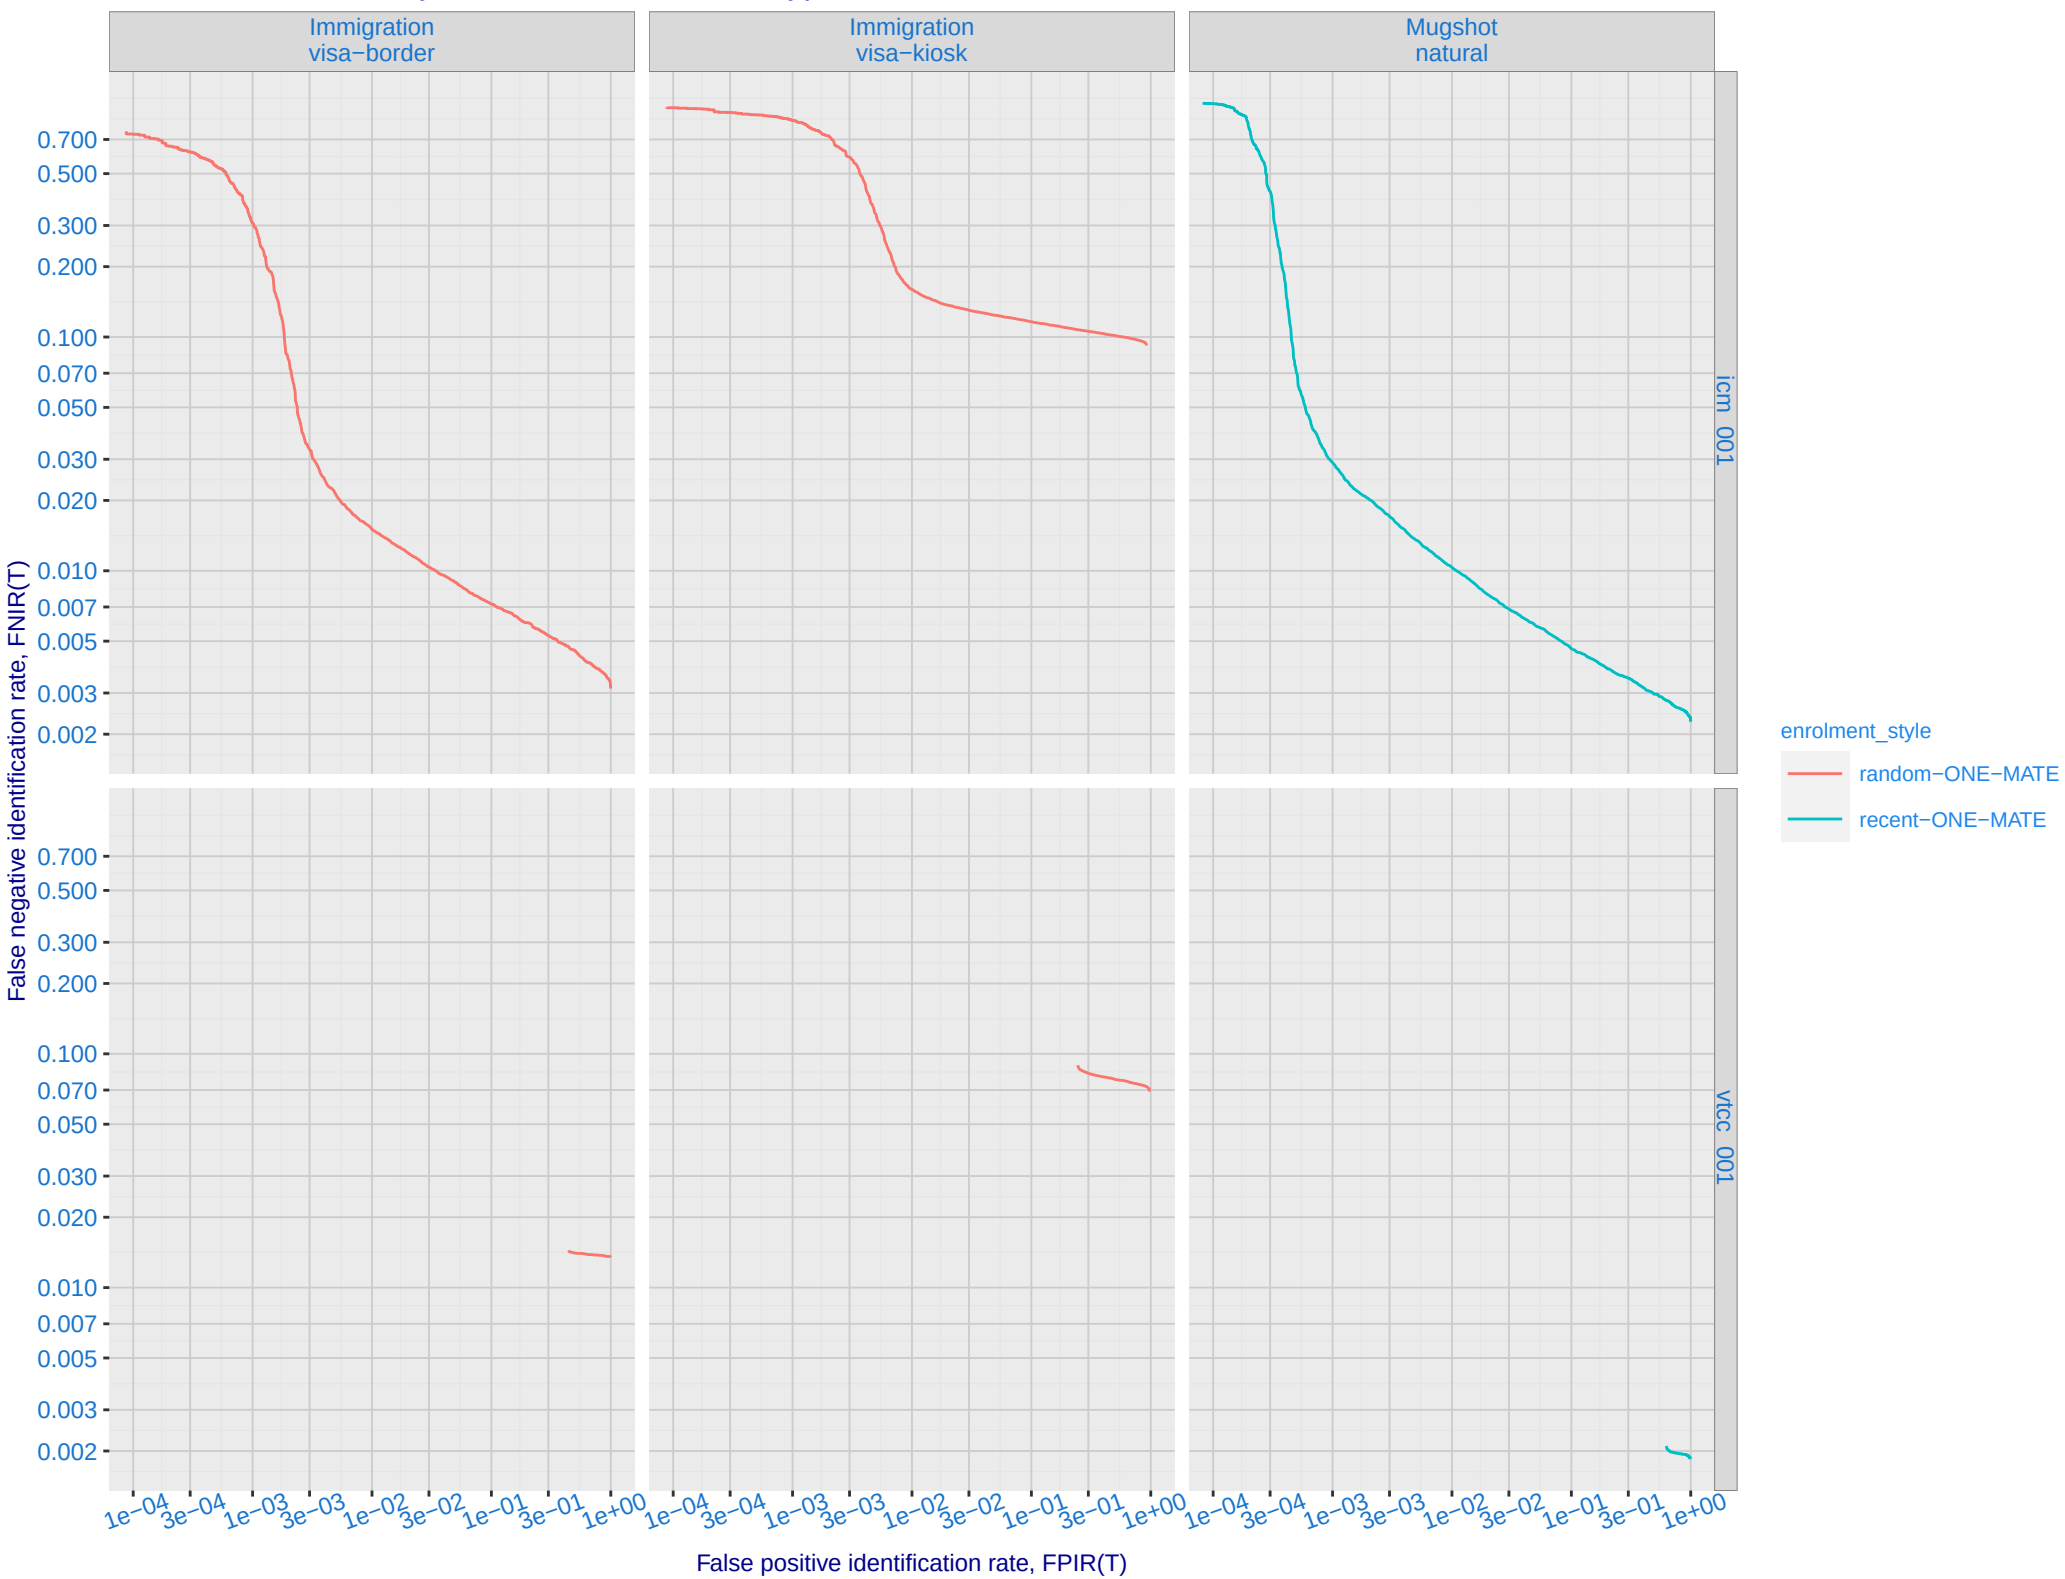

B: Mugshot natural images, identification mode: FNIR(N, L+1, T) vs. most accurate (vtcc_001)

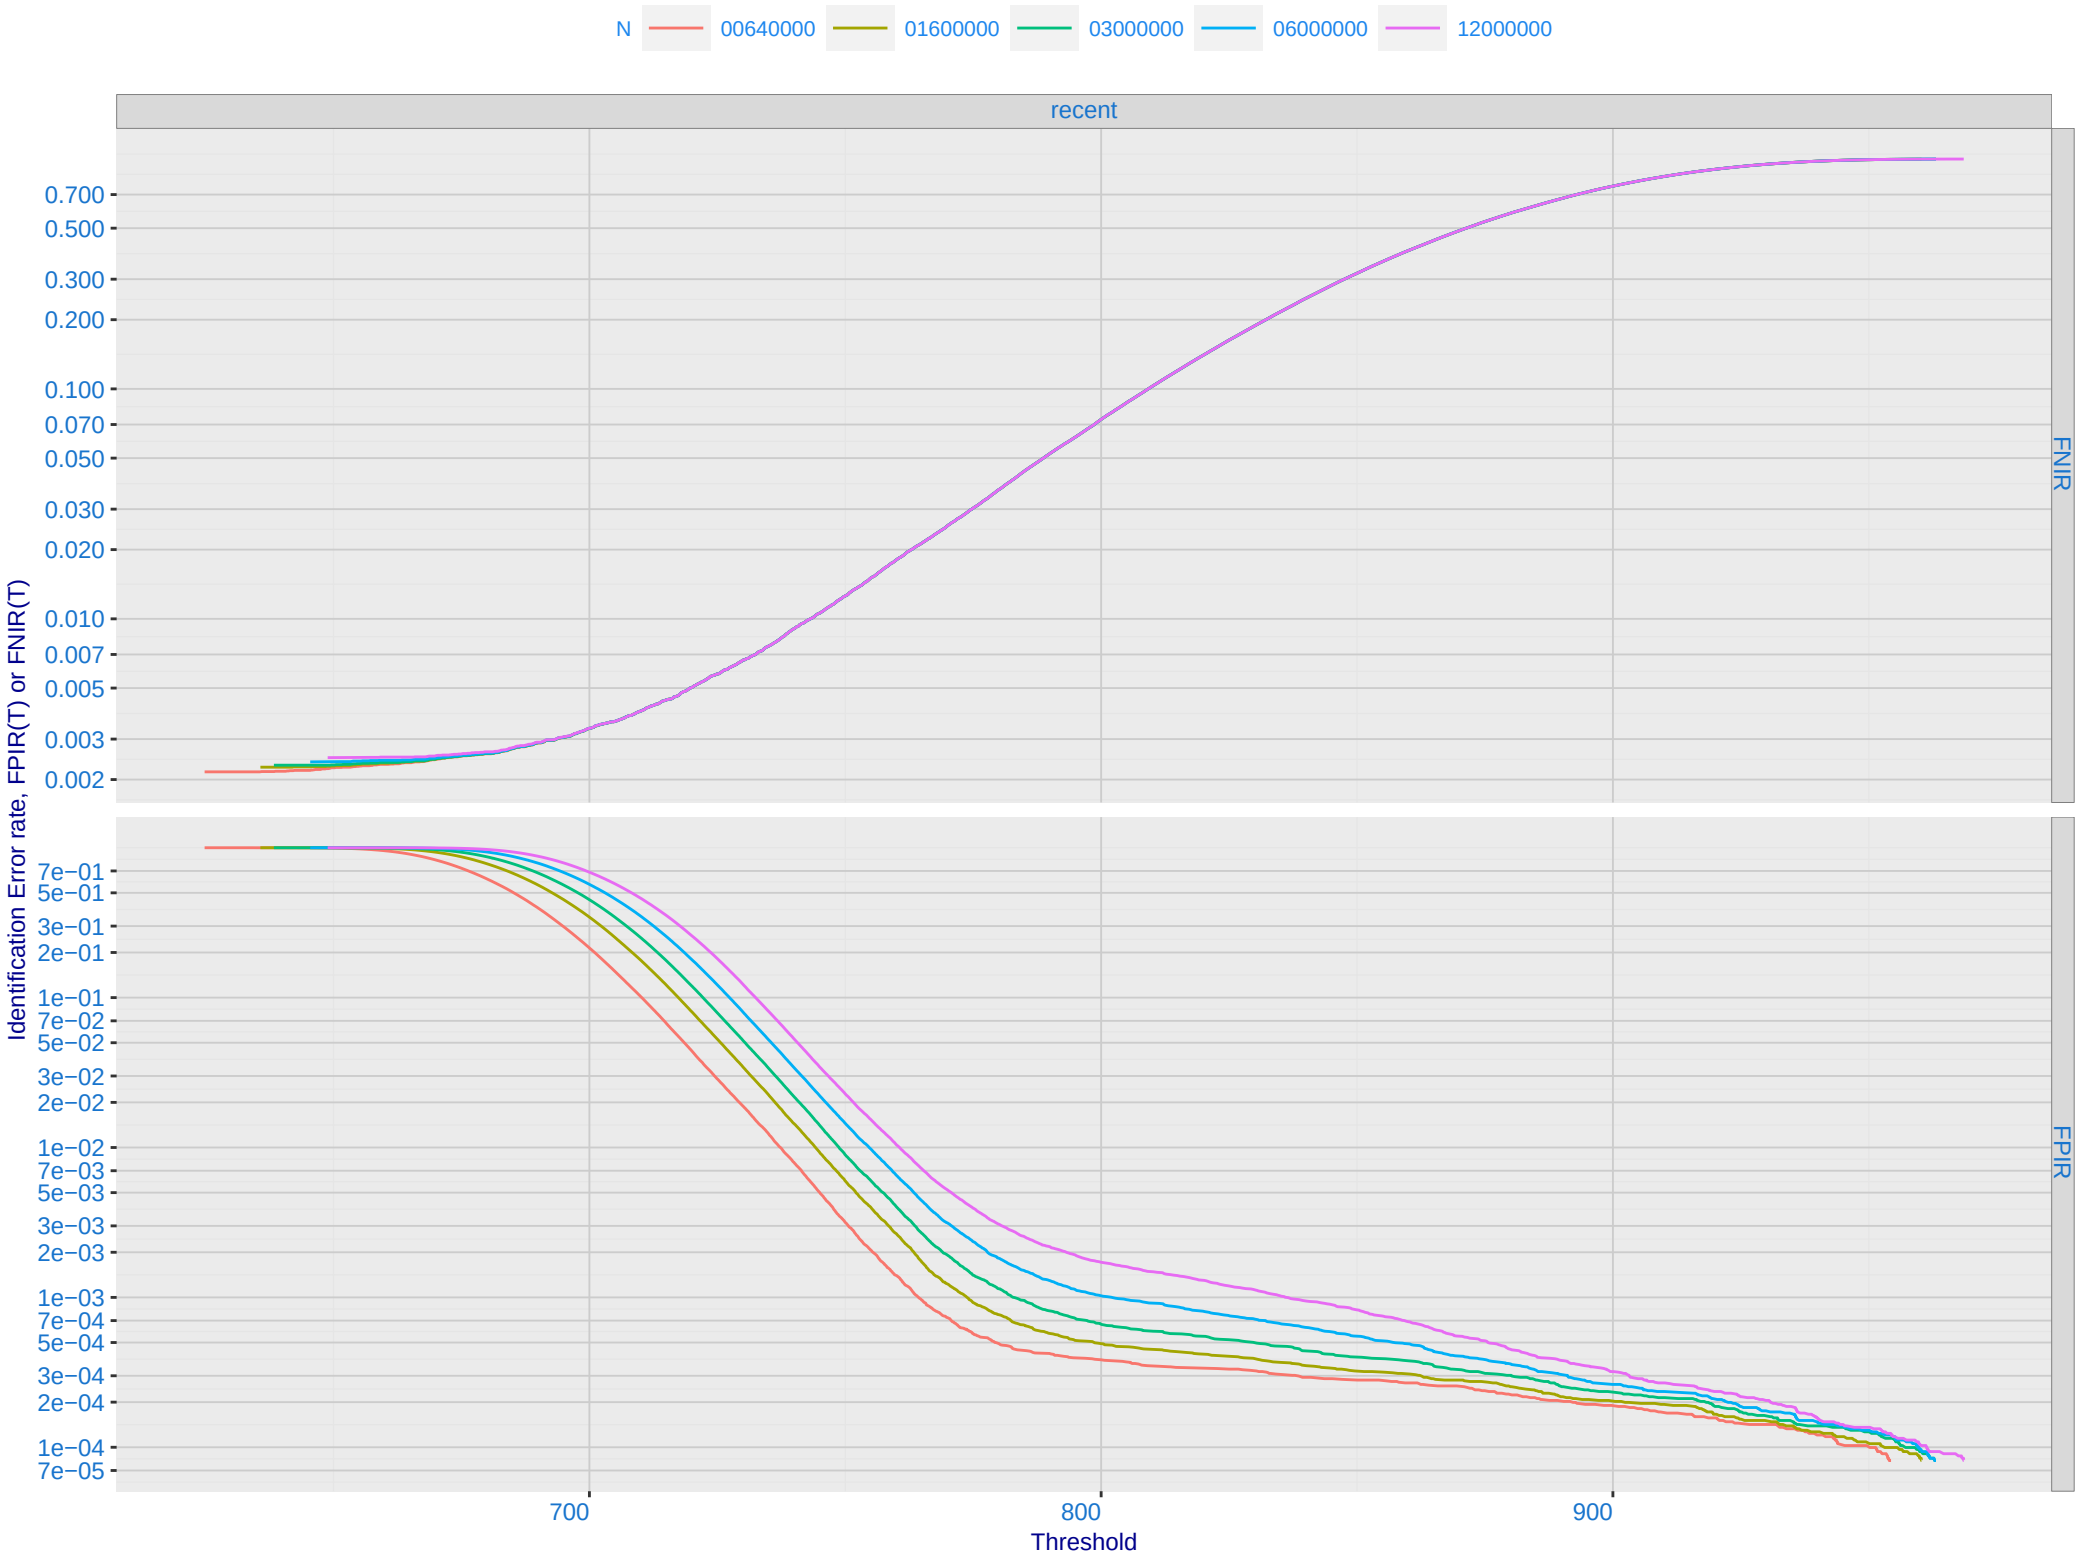

C: Evolution of accuracy for ICM algorithms on three datasets 2018 – present

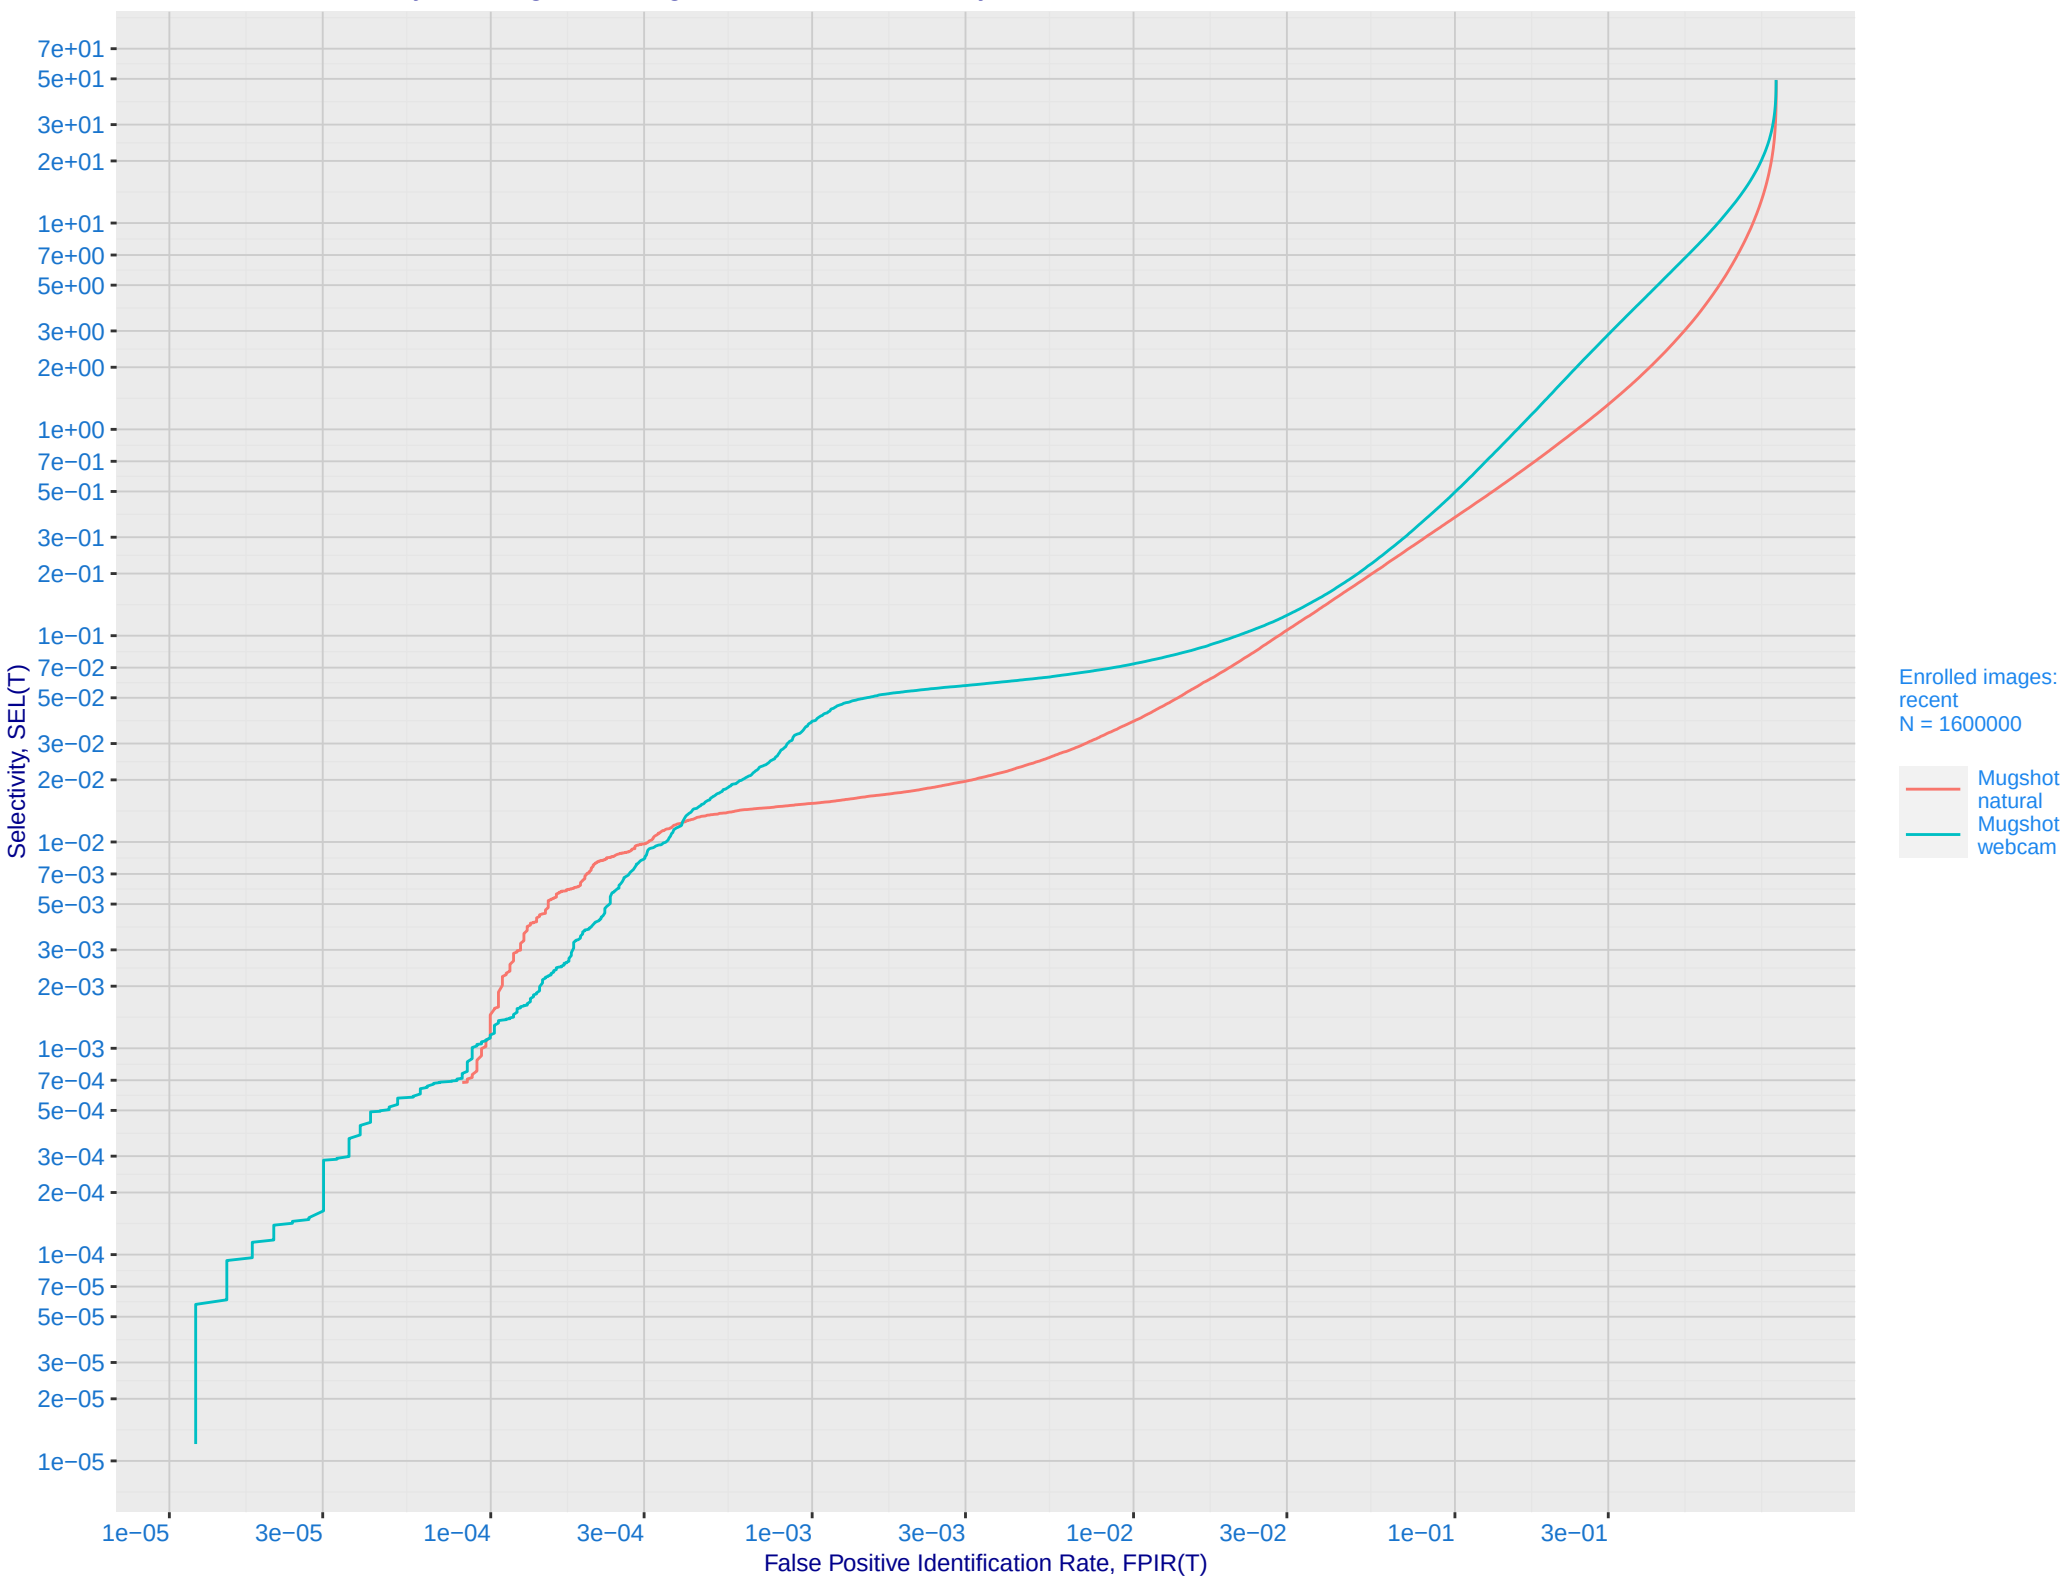

D: 1:N error tradeoff by dataset and enrollment type. N = 1600000 individuals

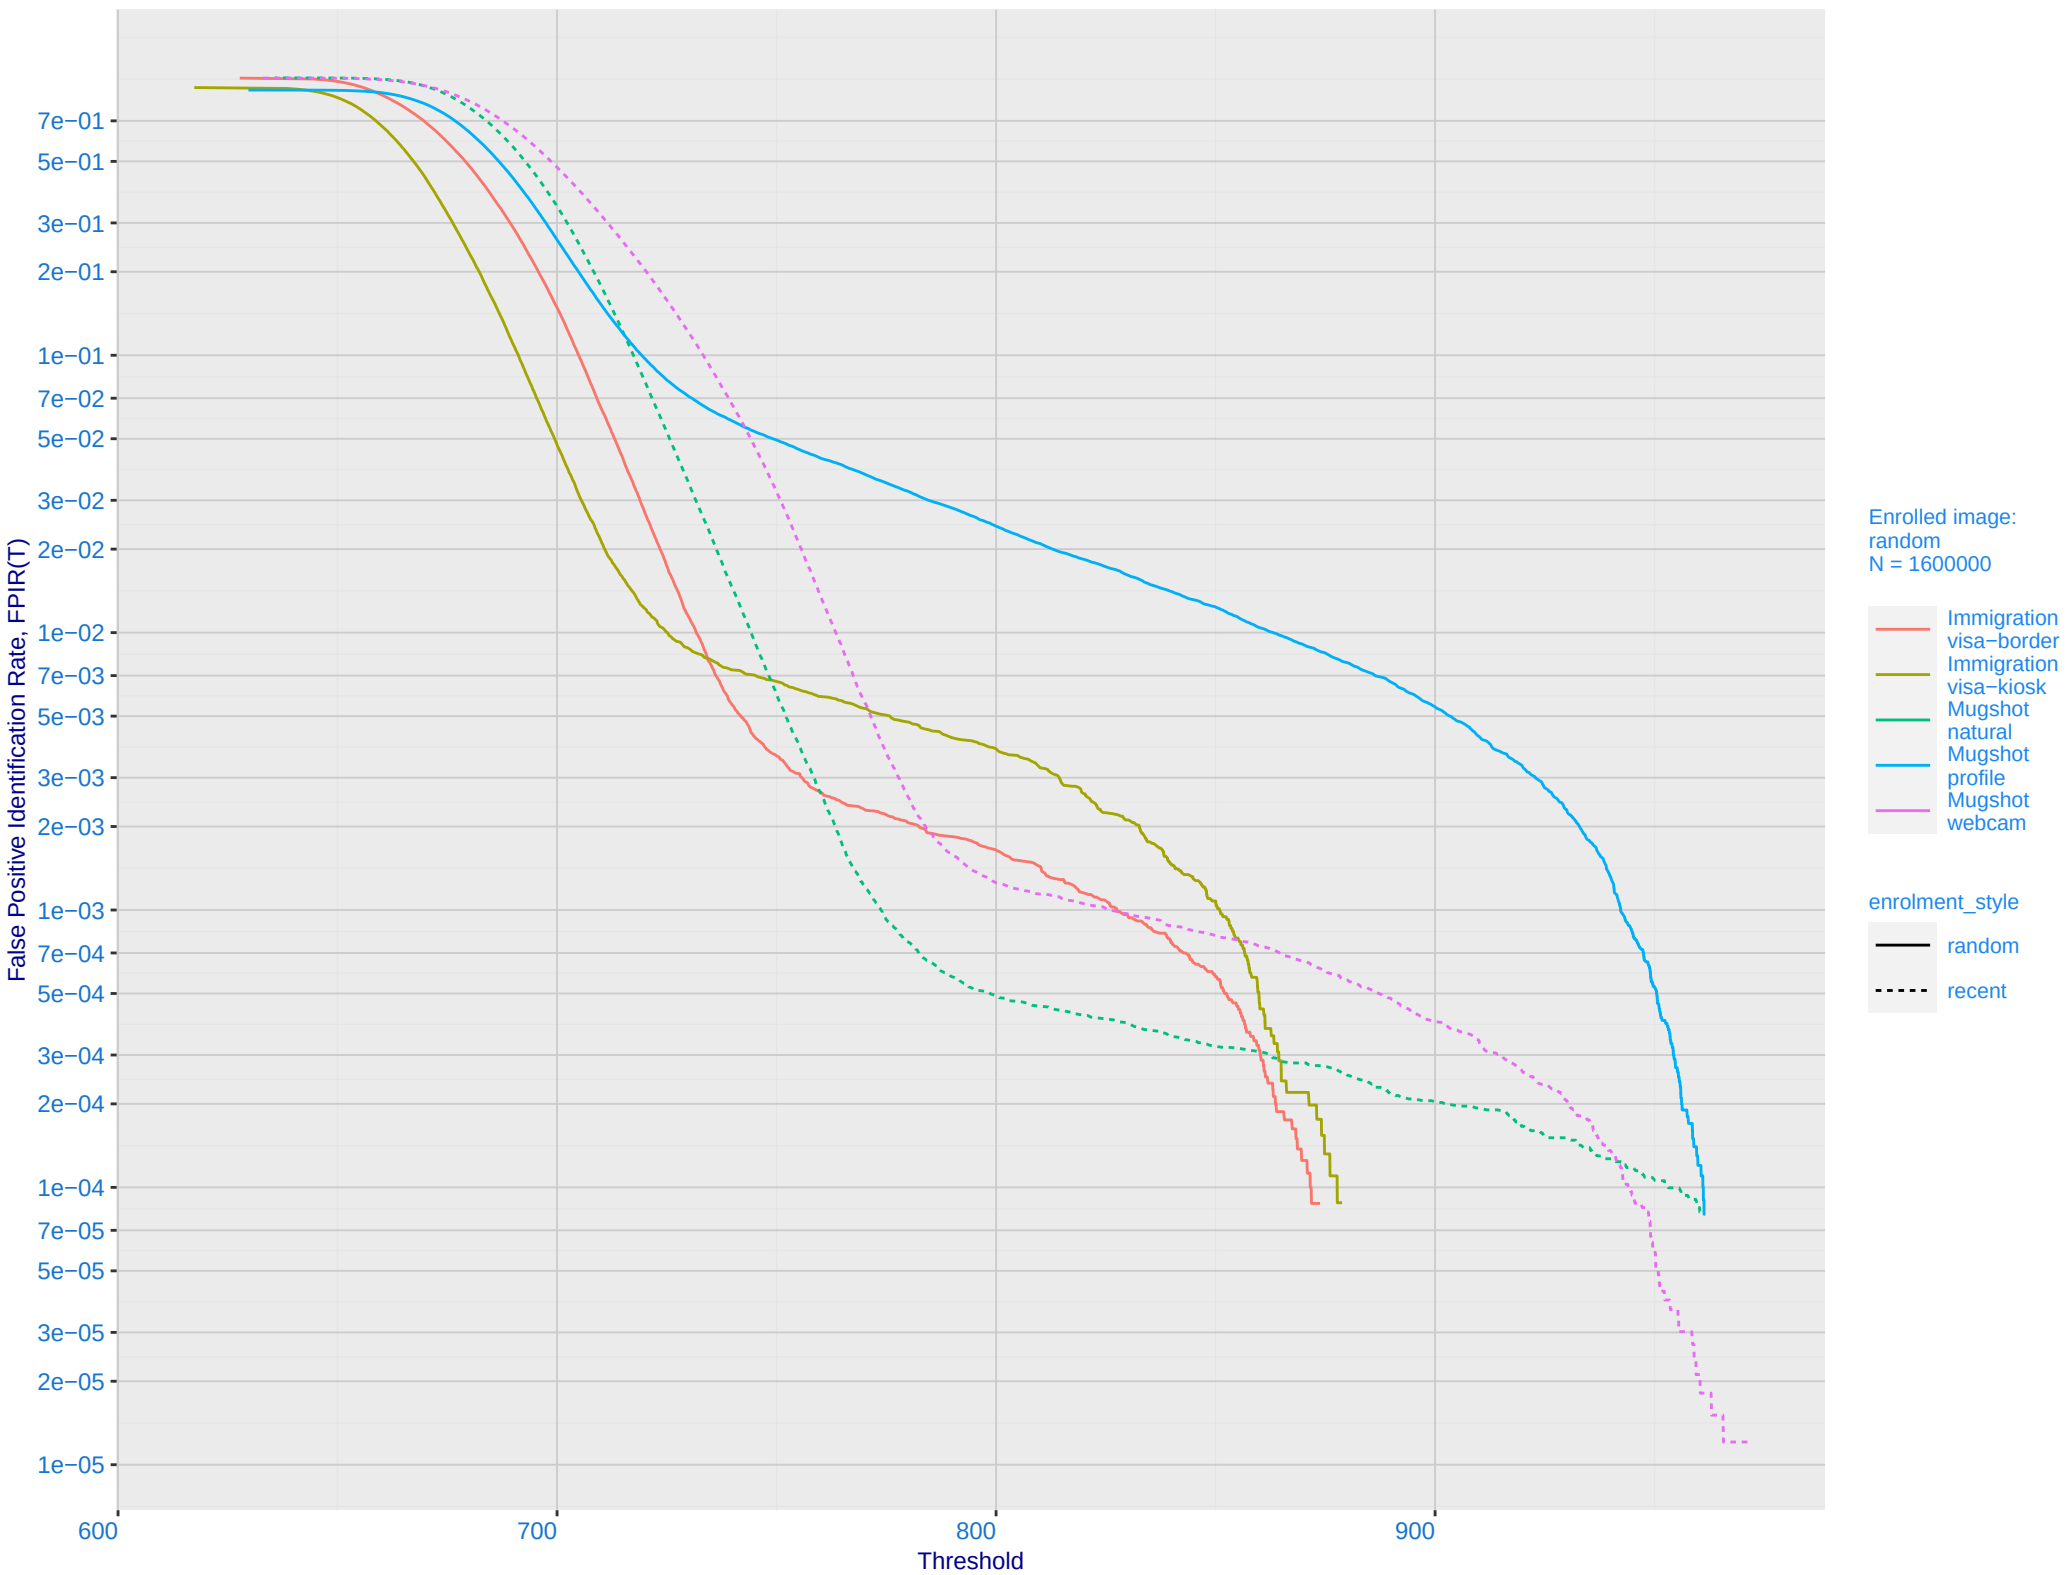

E: Dependence of error rates on T by number enrolled identities, N, for Mugshot natural images

F: FPIR vs. Selectivity for mugshot images, N = 1600000 subjects enrolled with one recent mate

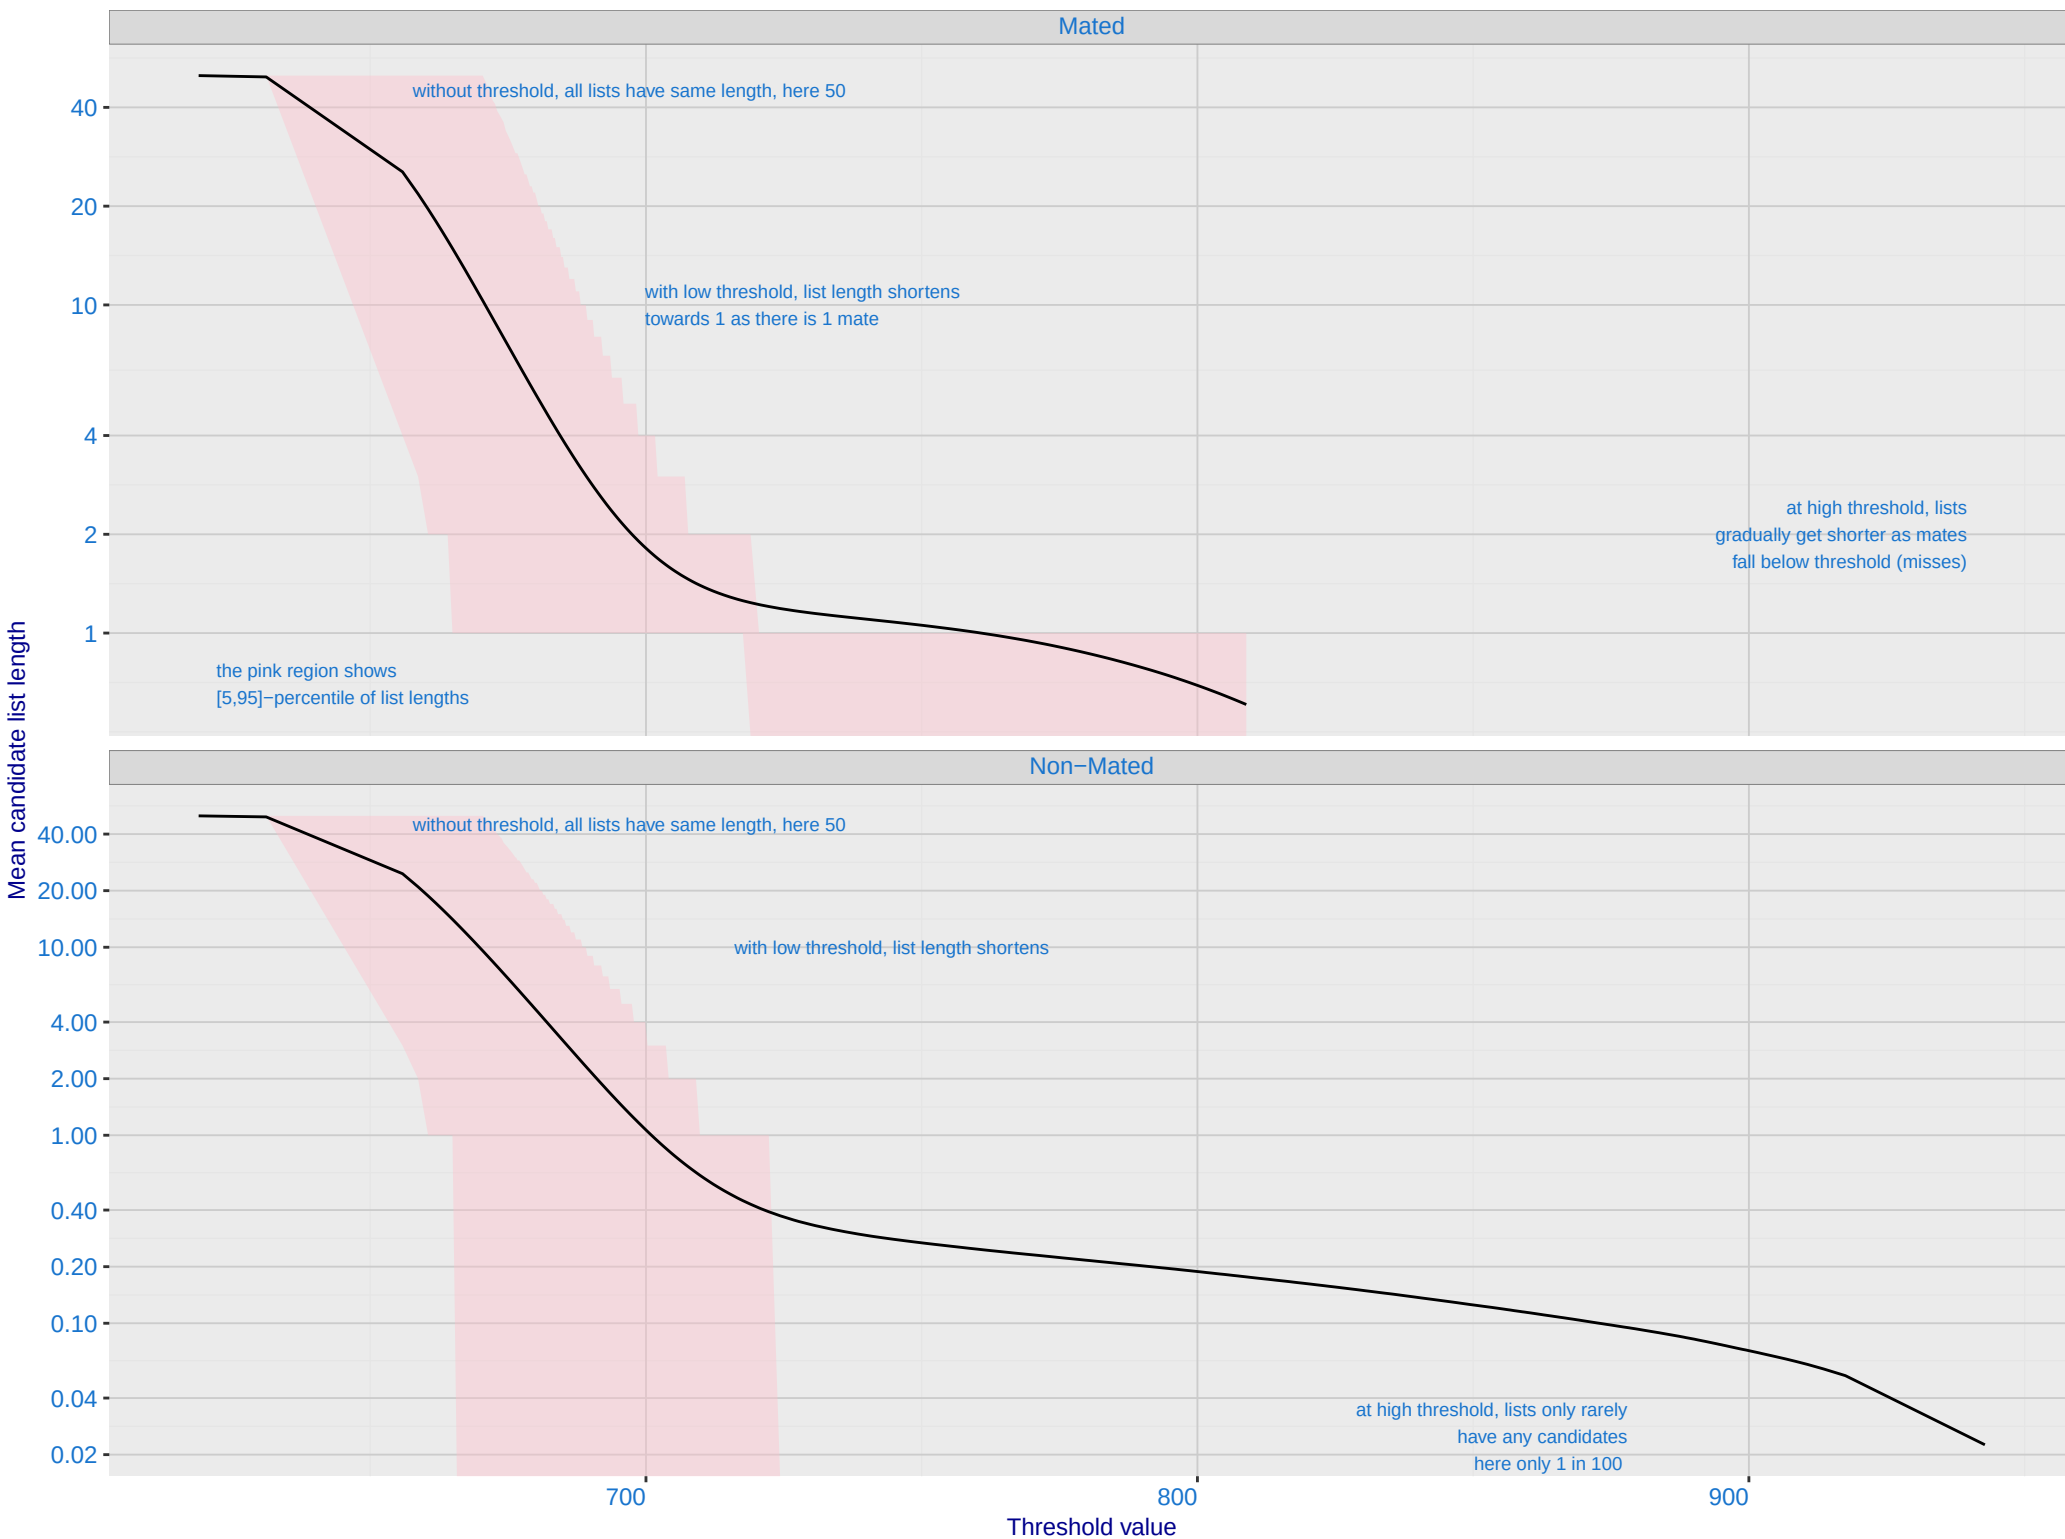

G: FPIR dependence on T by probe type for N = 1600000 subjects

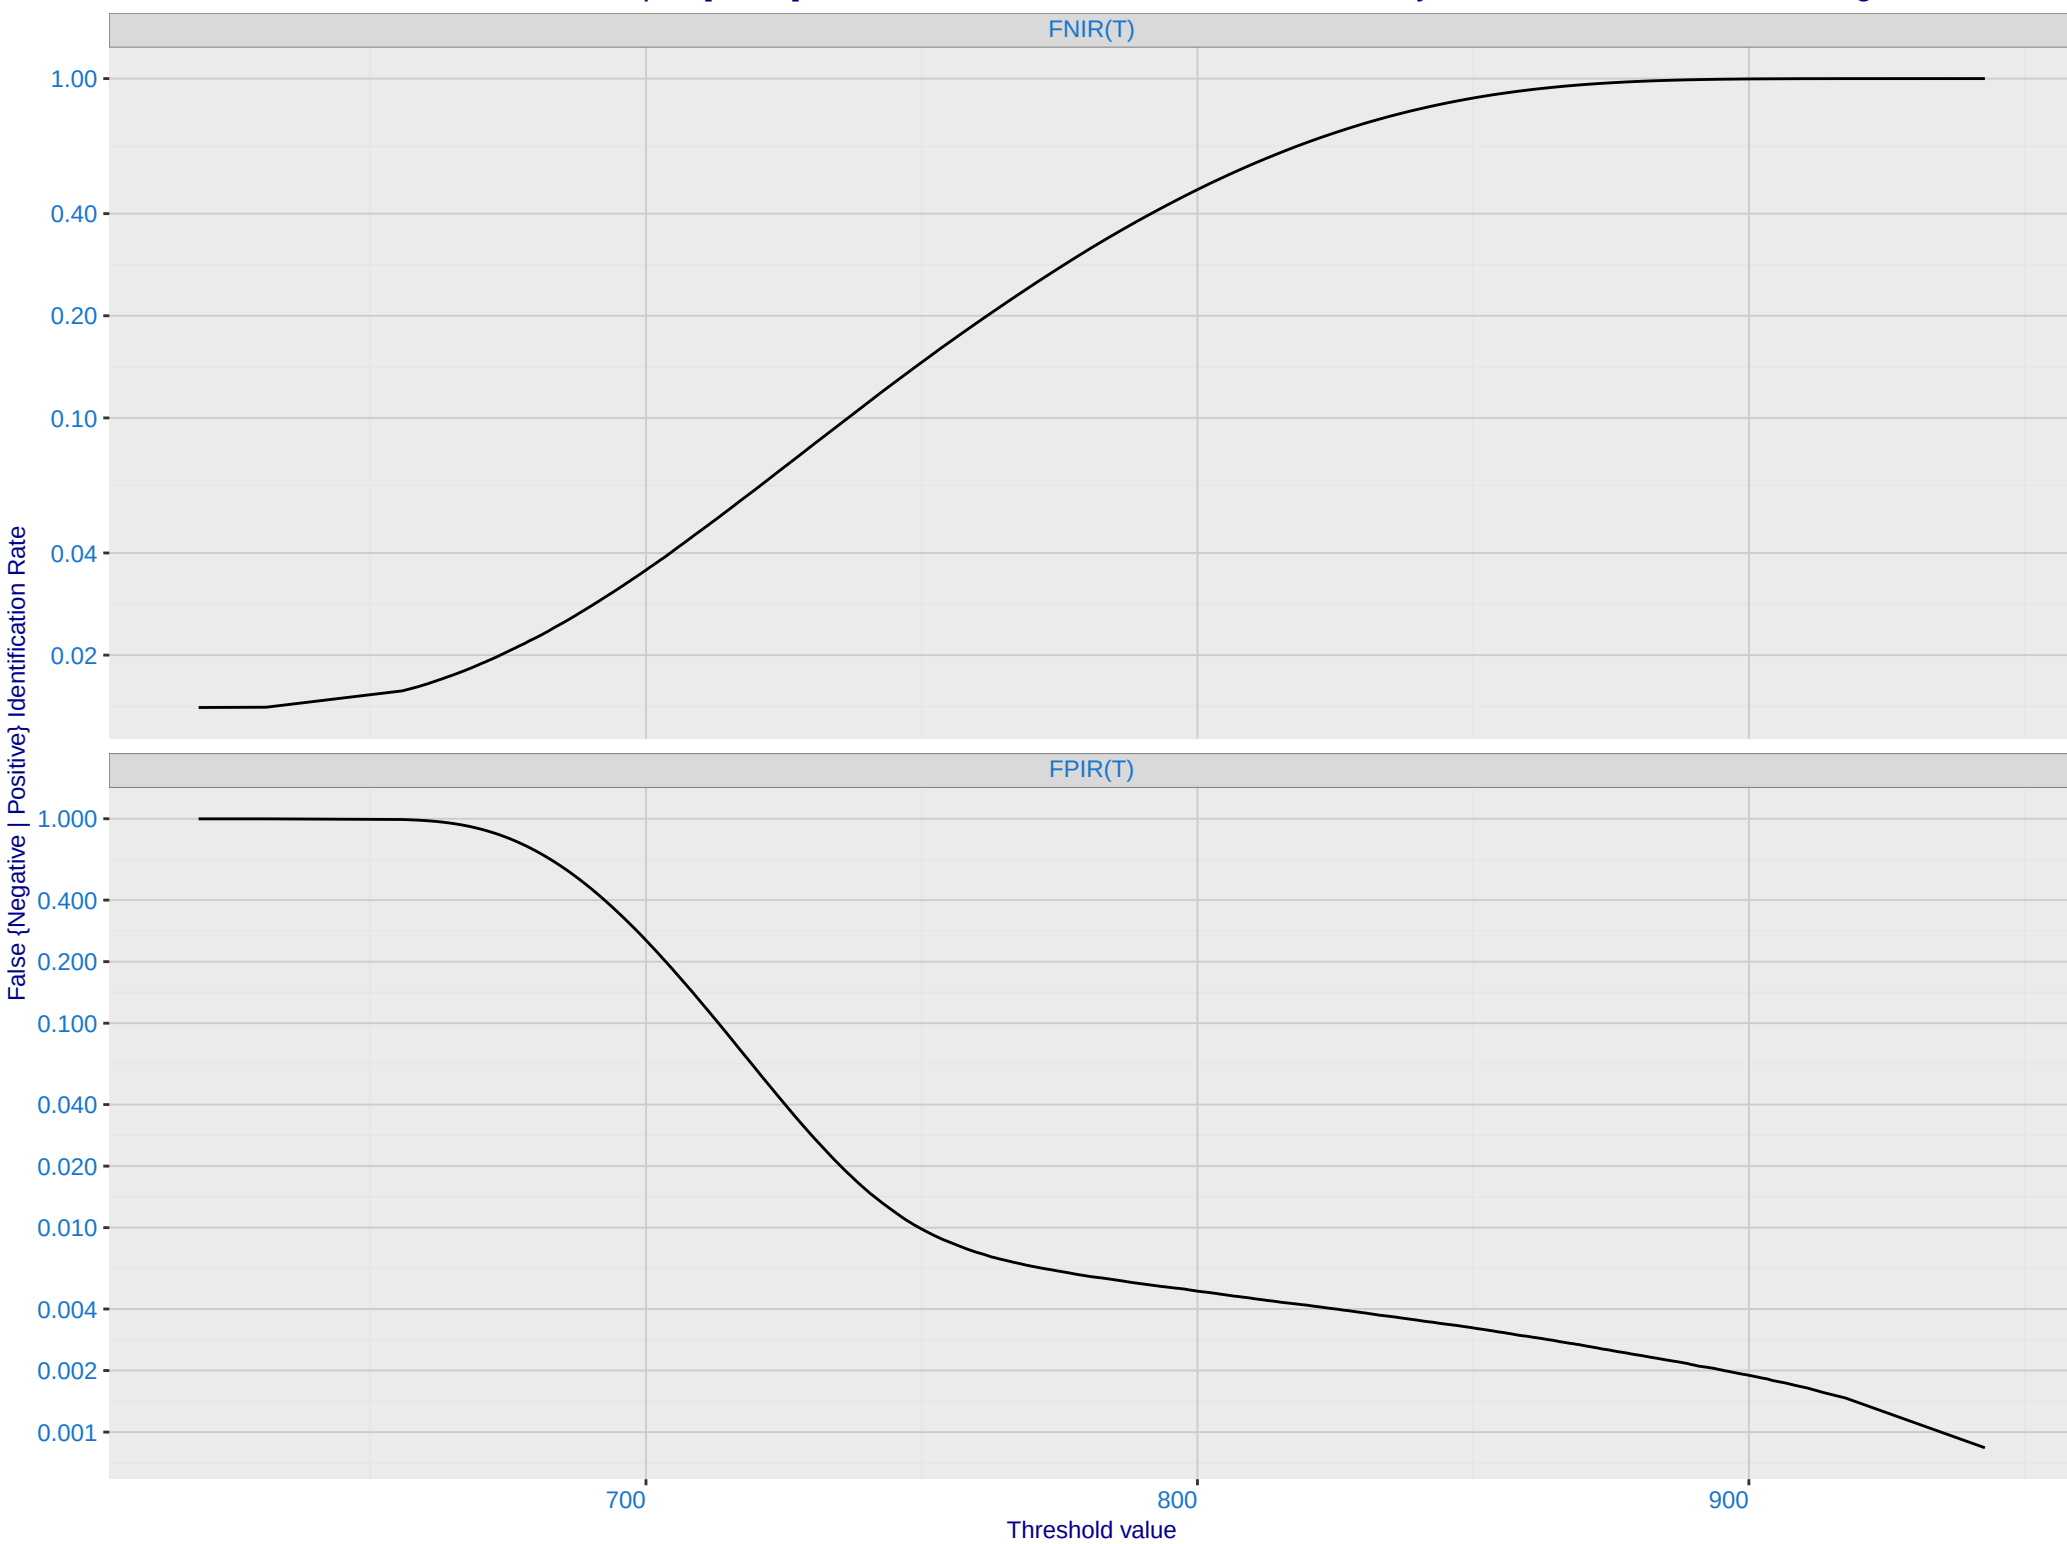

H: Reduced length candidate lists for human review

Dataset is border–border with time–lapse [10,15] YRS with N = 1600000. Probes are 10–15 years later than enrollment image

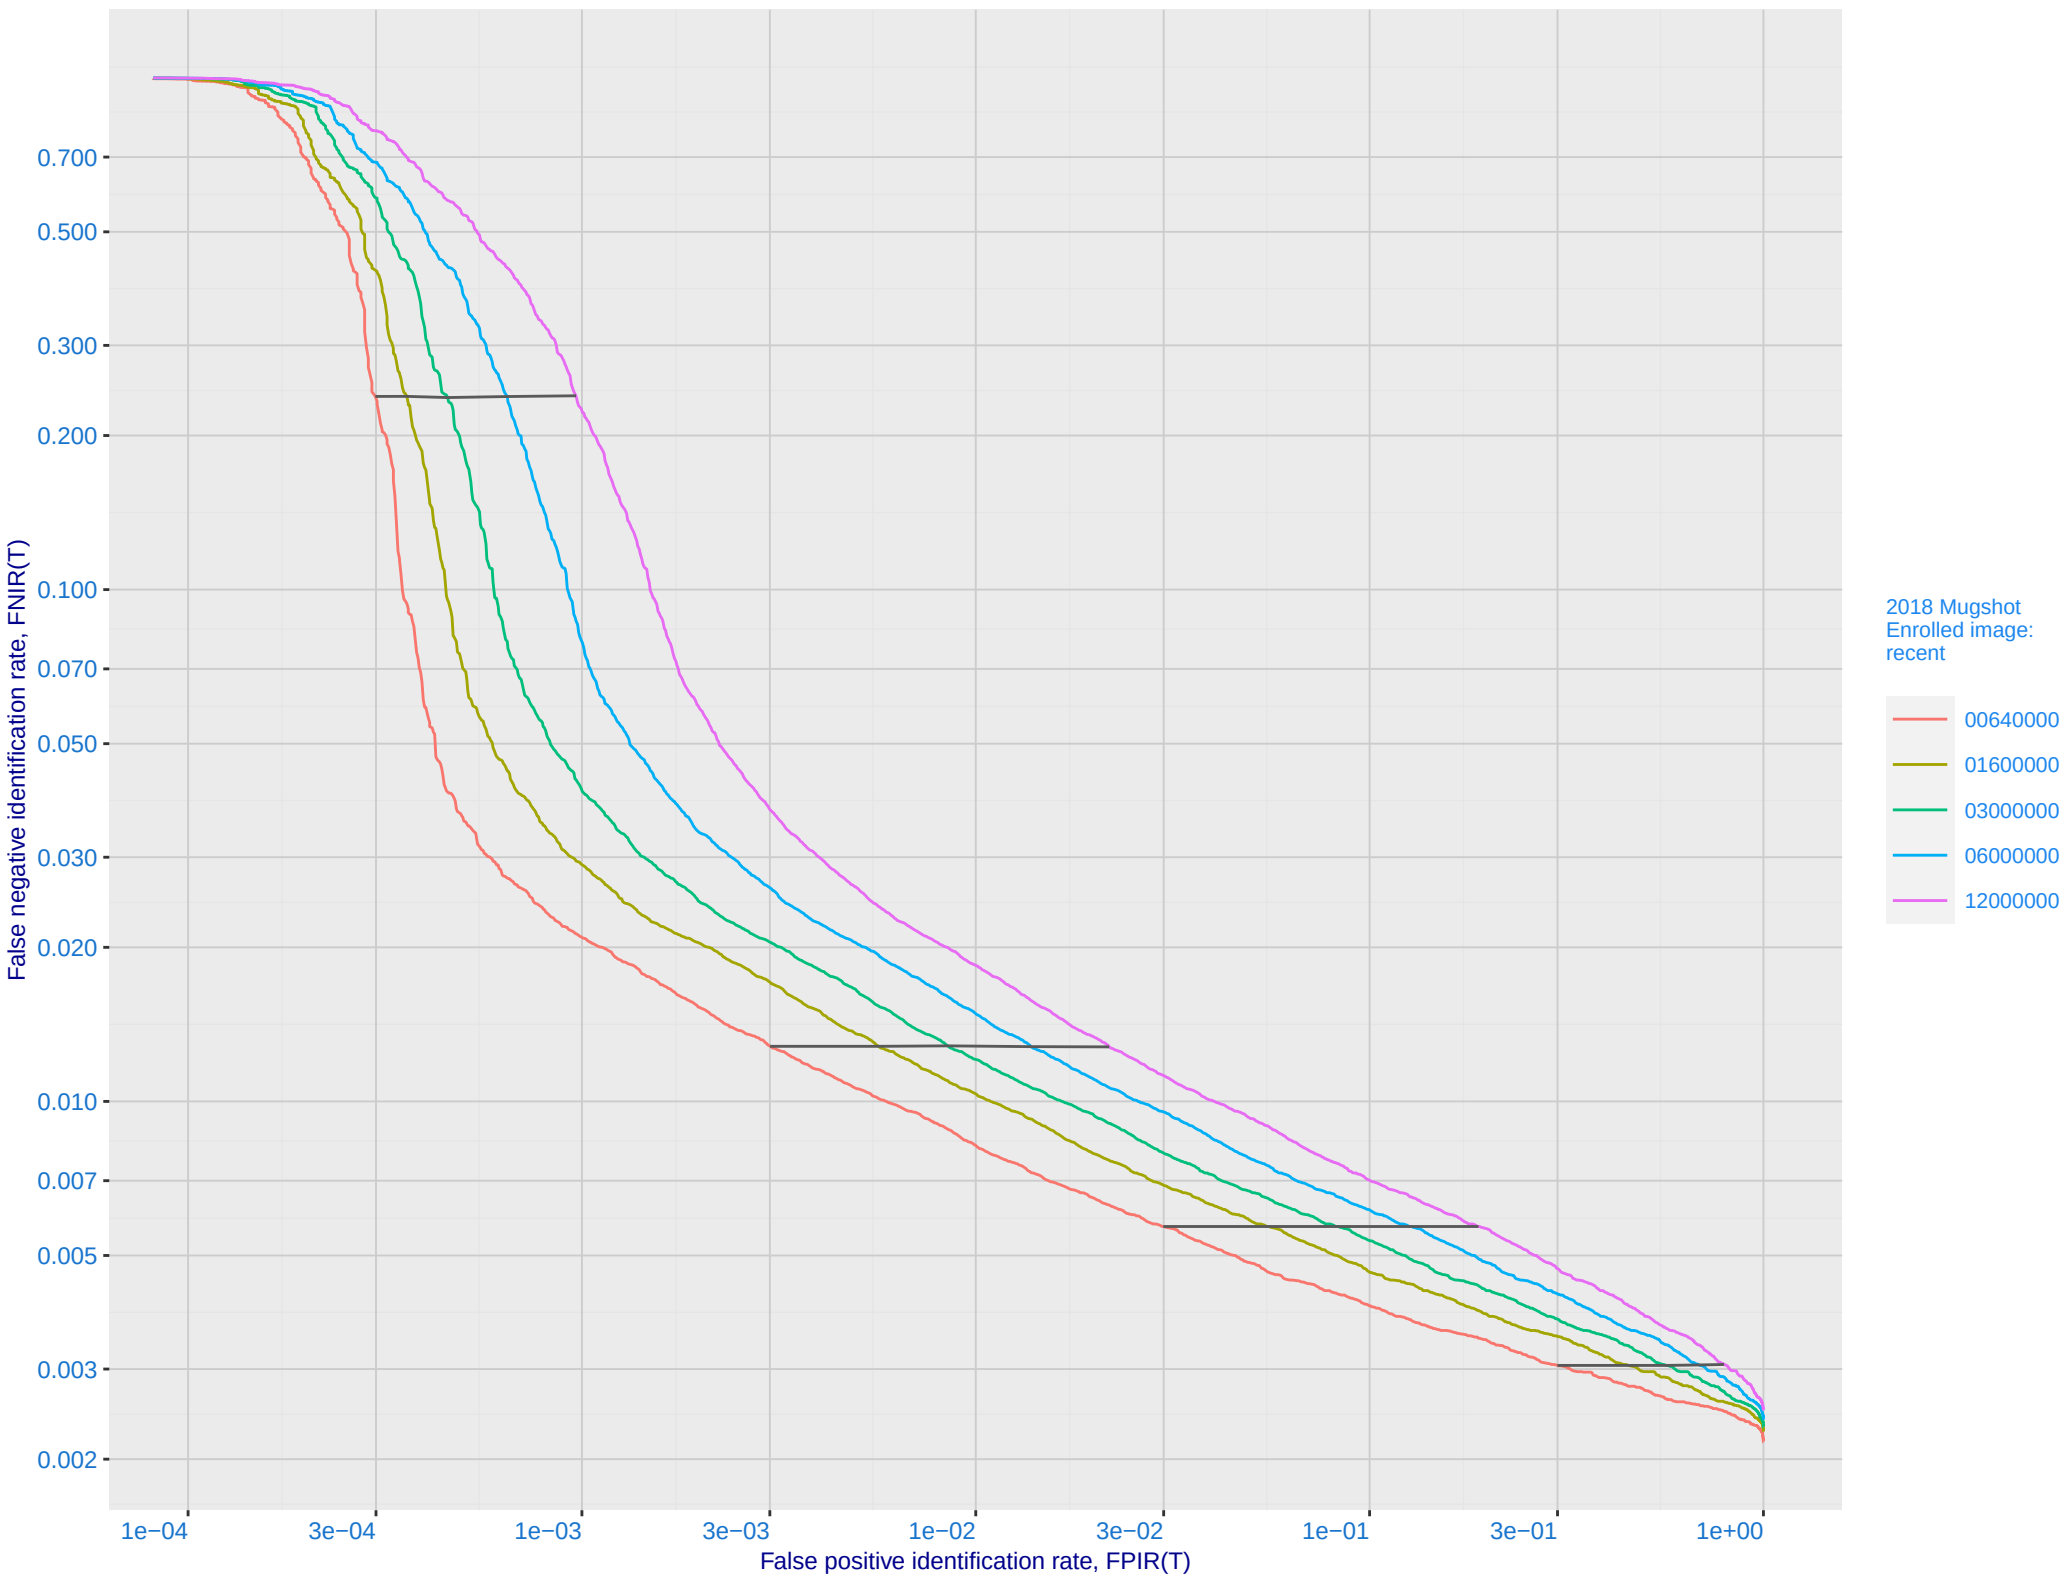

I: FNIR and FPIR dependence on threshold

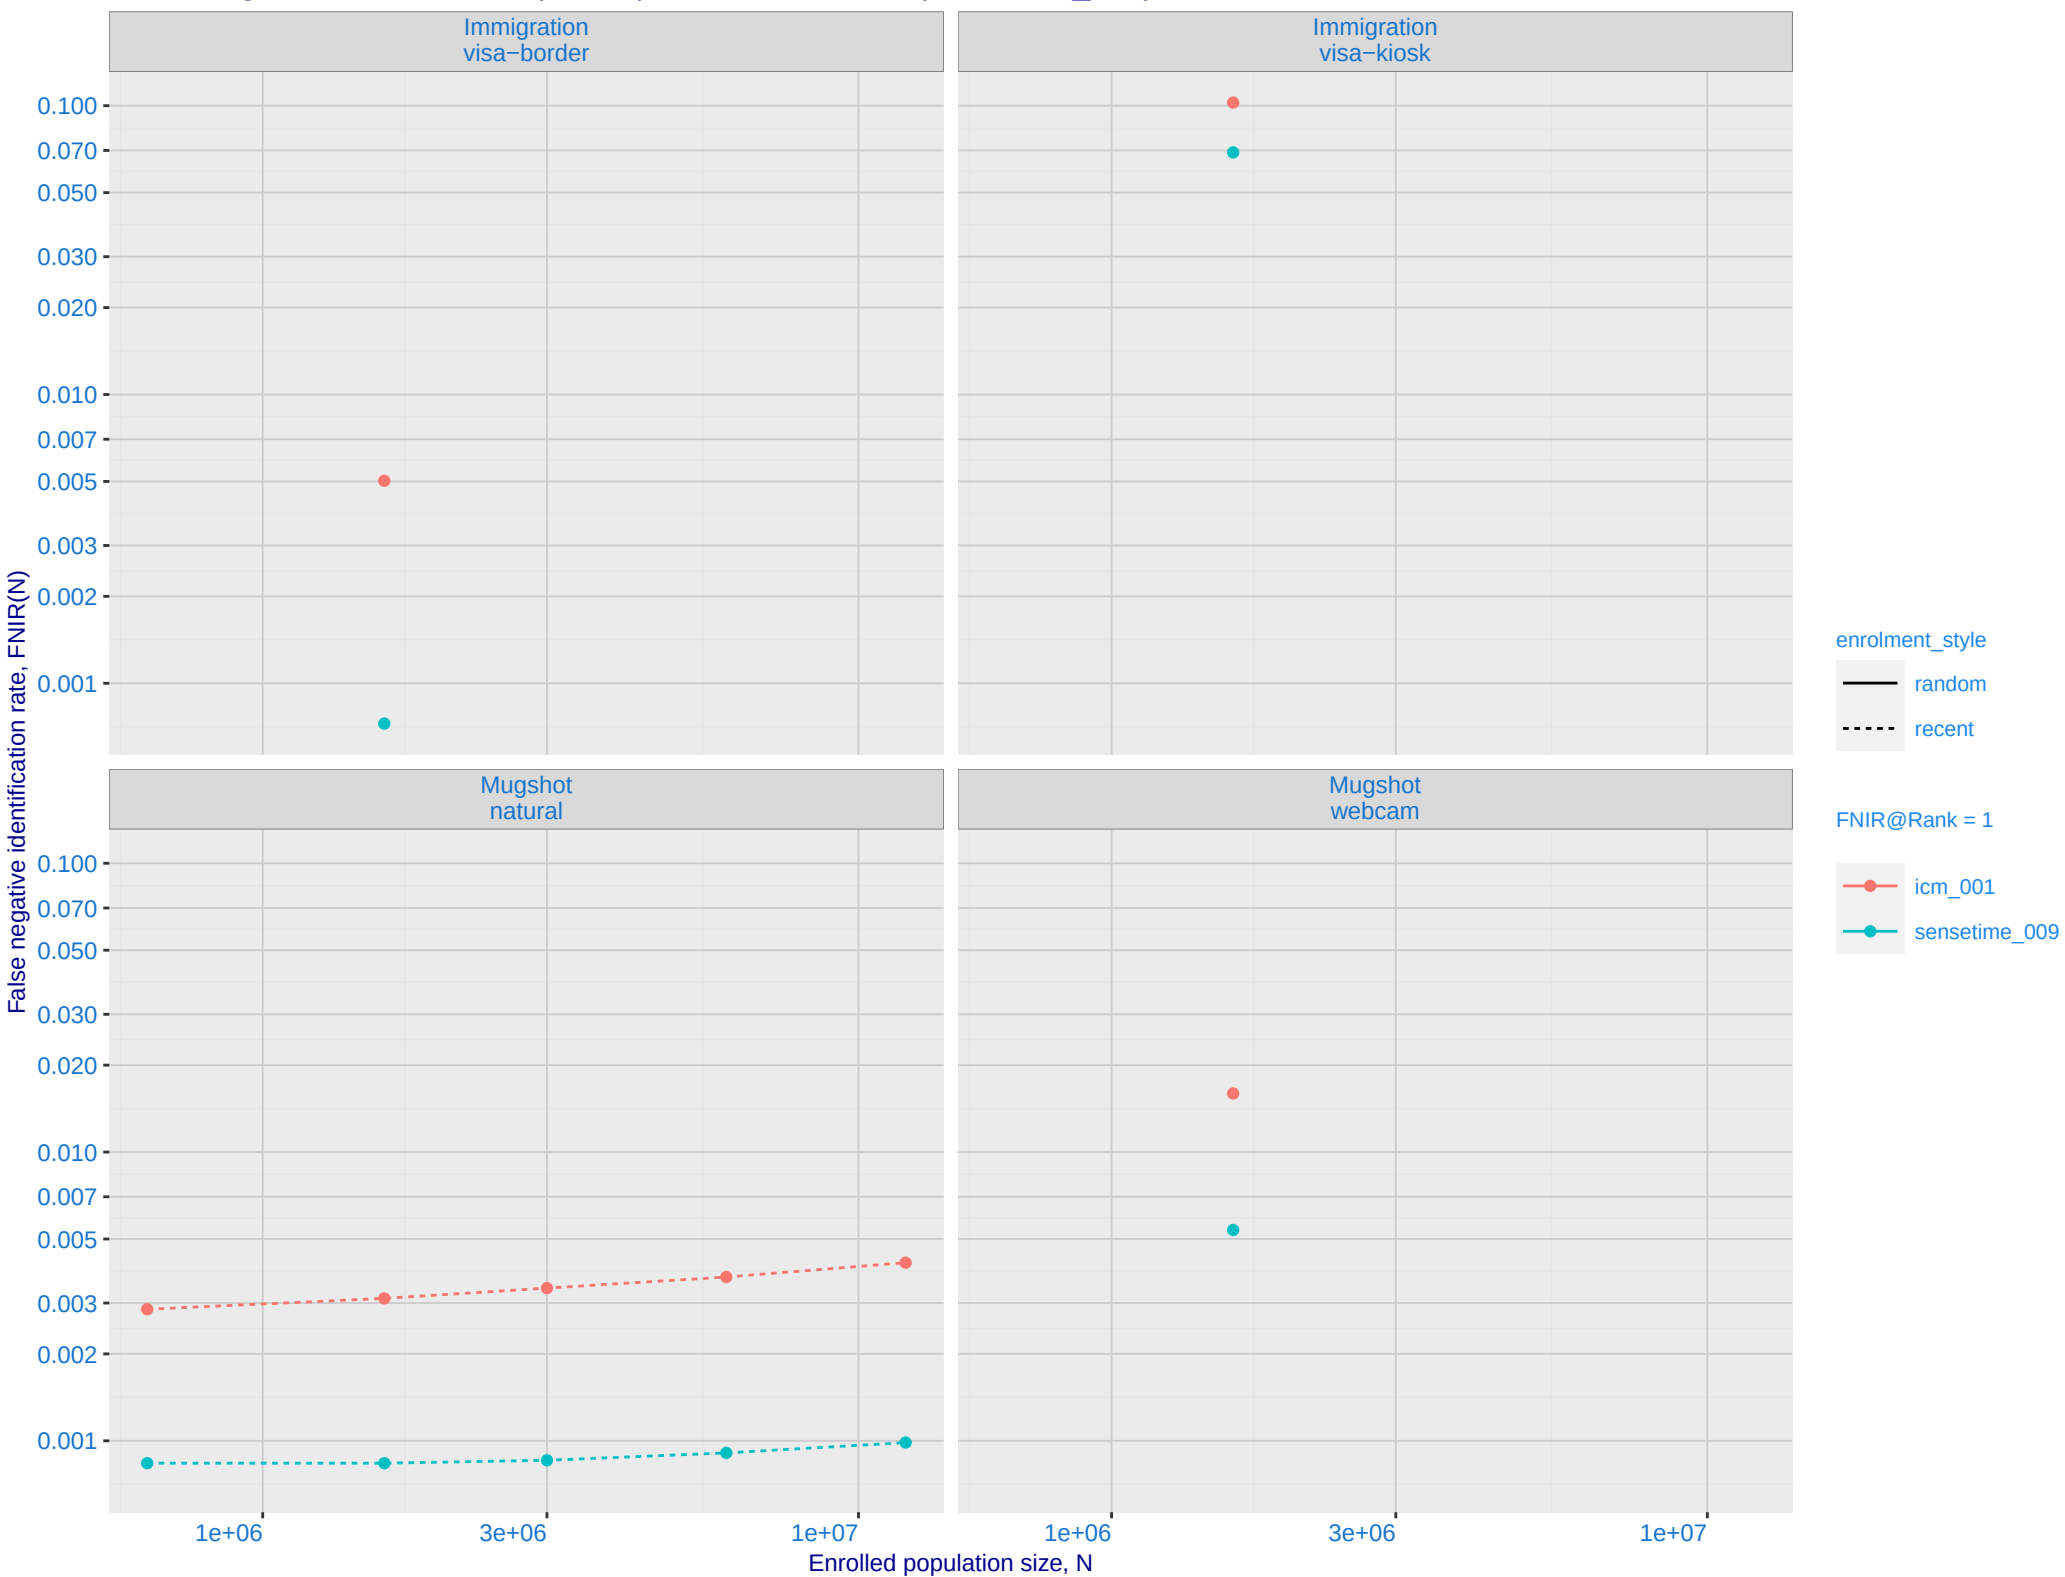

Dataset is border-border with time-lapse [10,15] YRS with N = 1600000. Probes are 10-15 years later than enrollment image

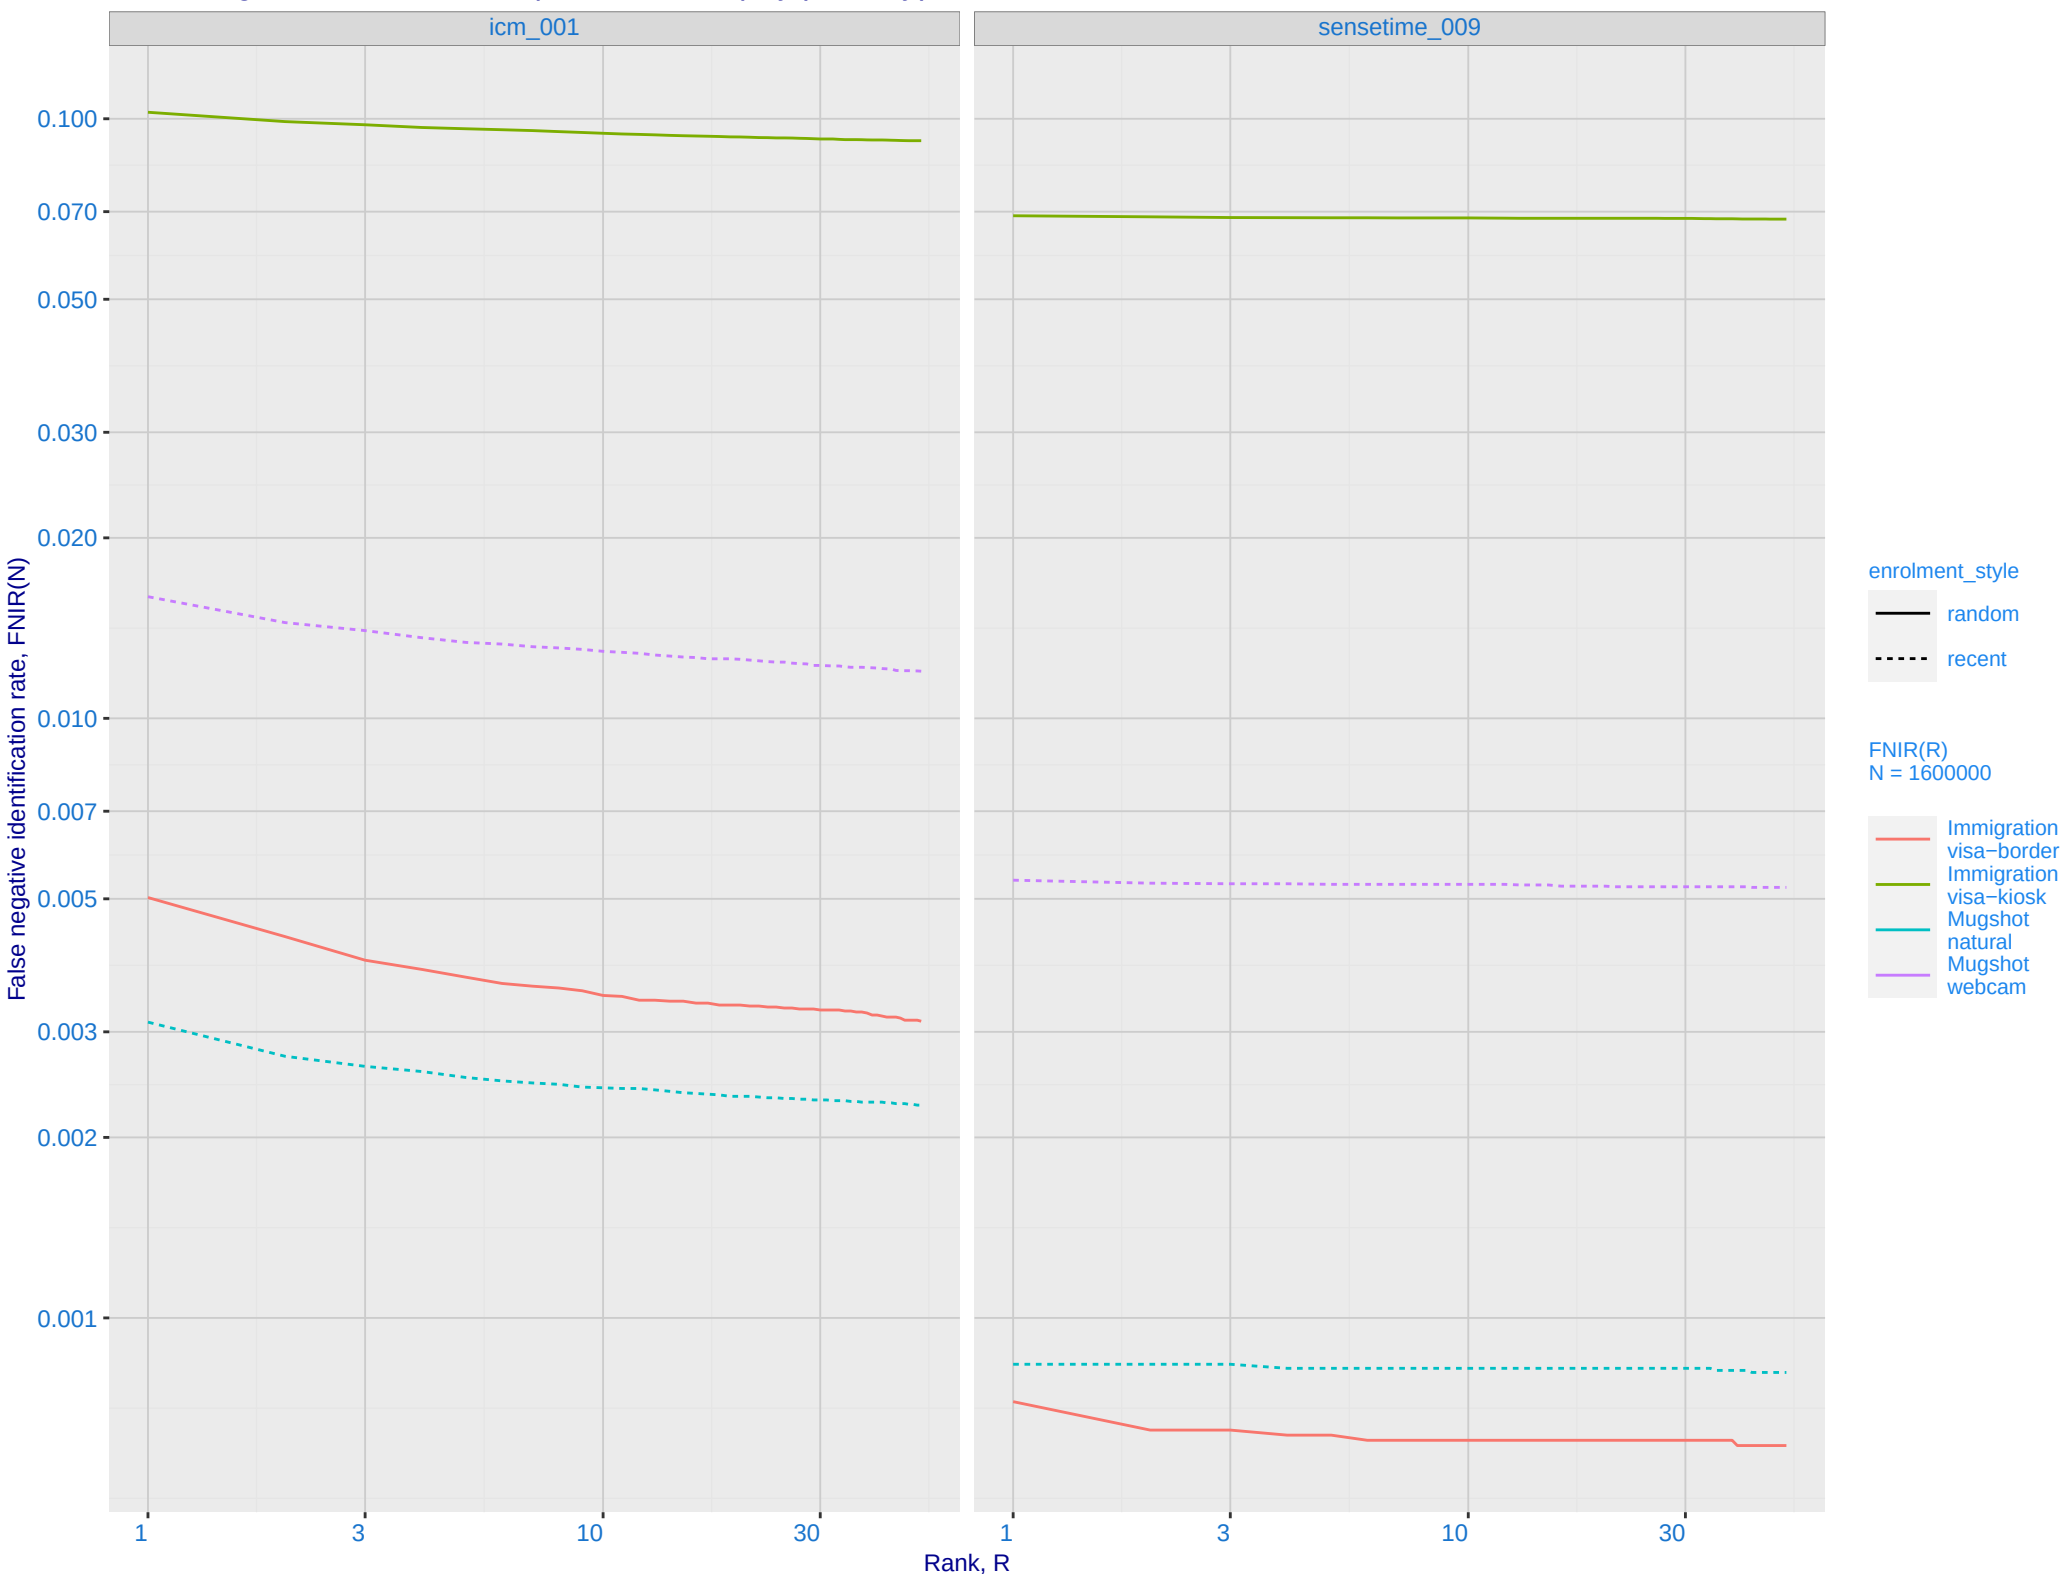

J: DET for Mugshot natural images and various N. Links connect points of equal threshold.

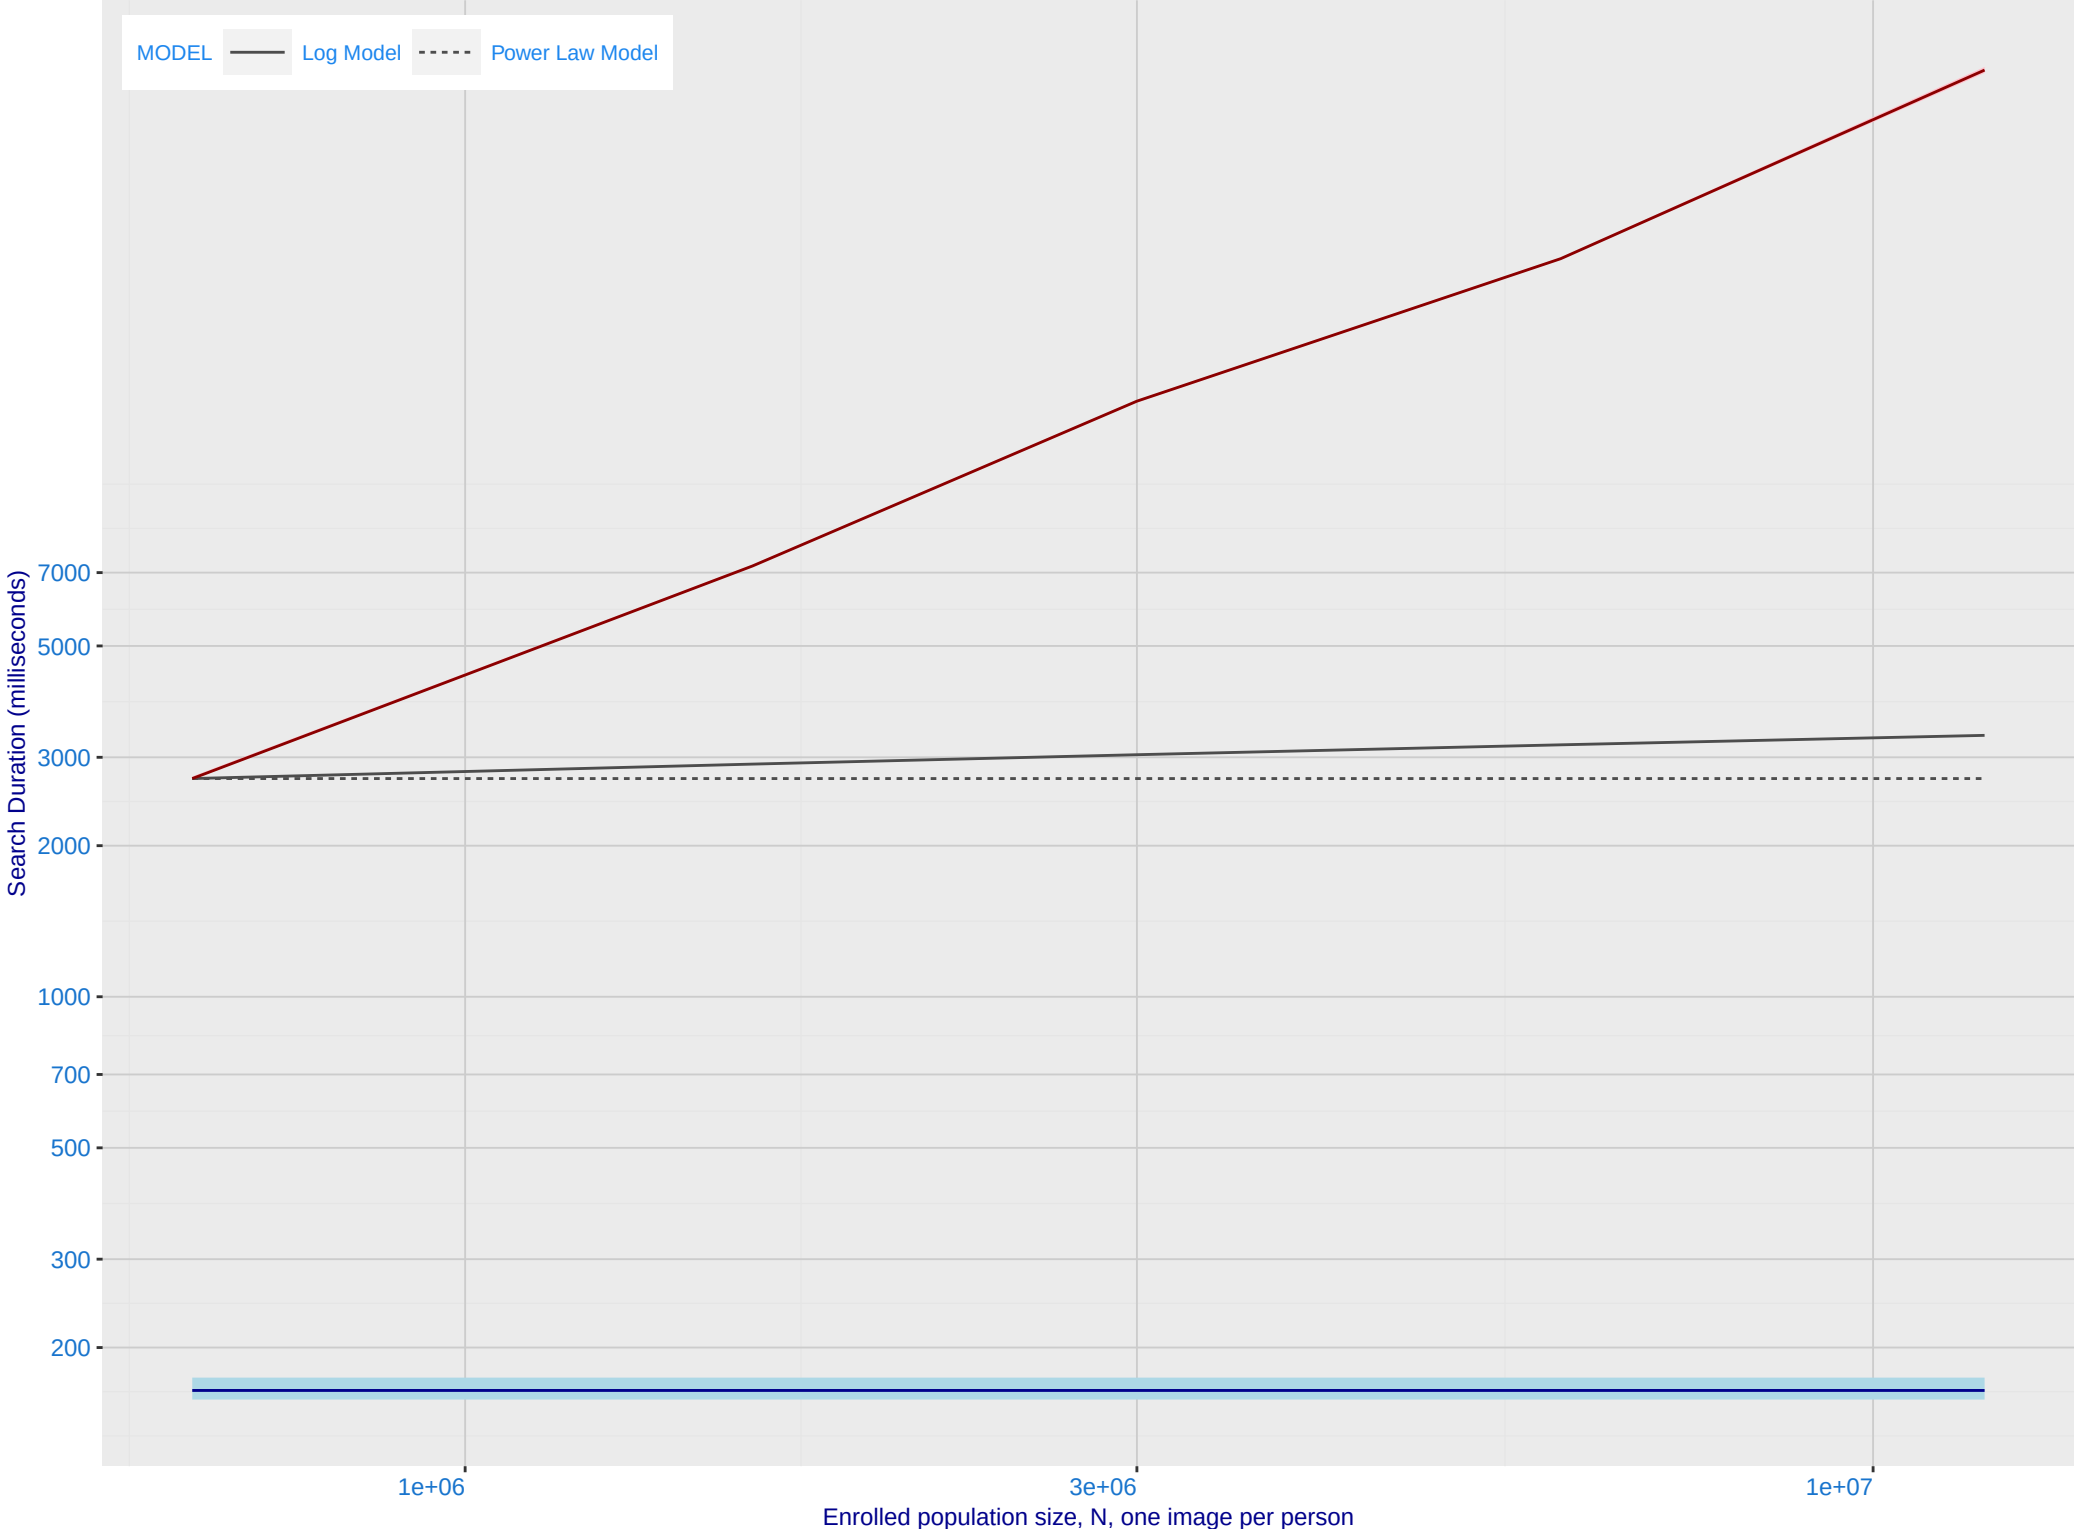

K: Investigational mode: FNIR(N, 1, 0) vs. most accurate (sensetime_009)

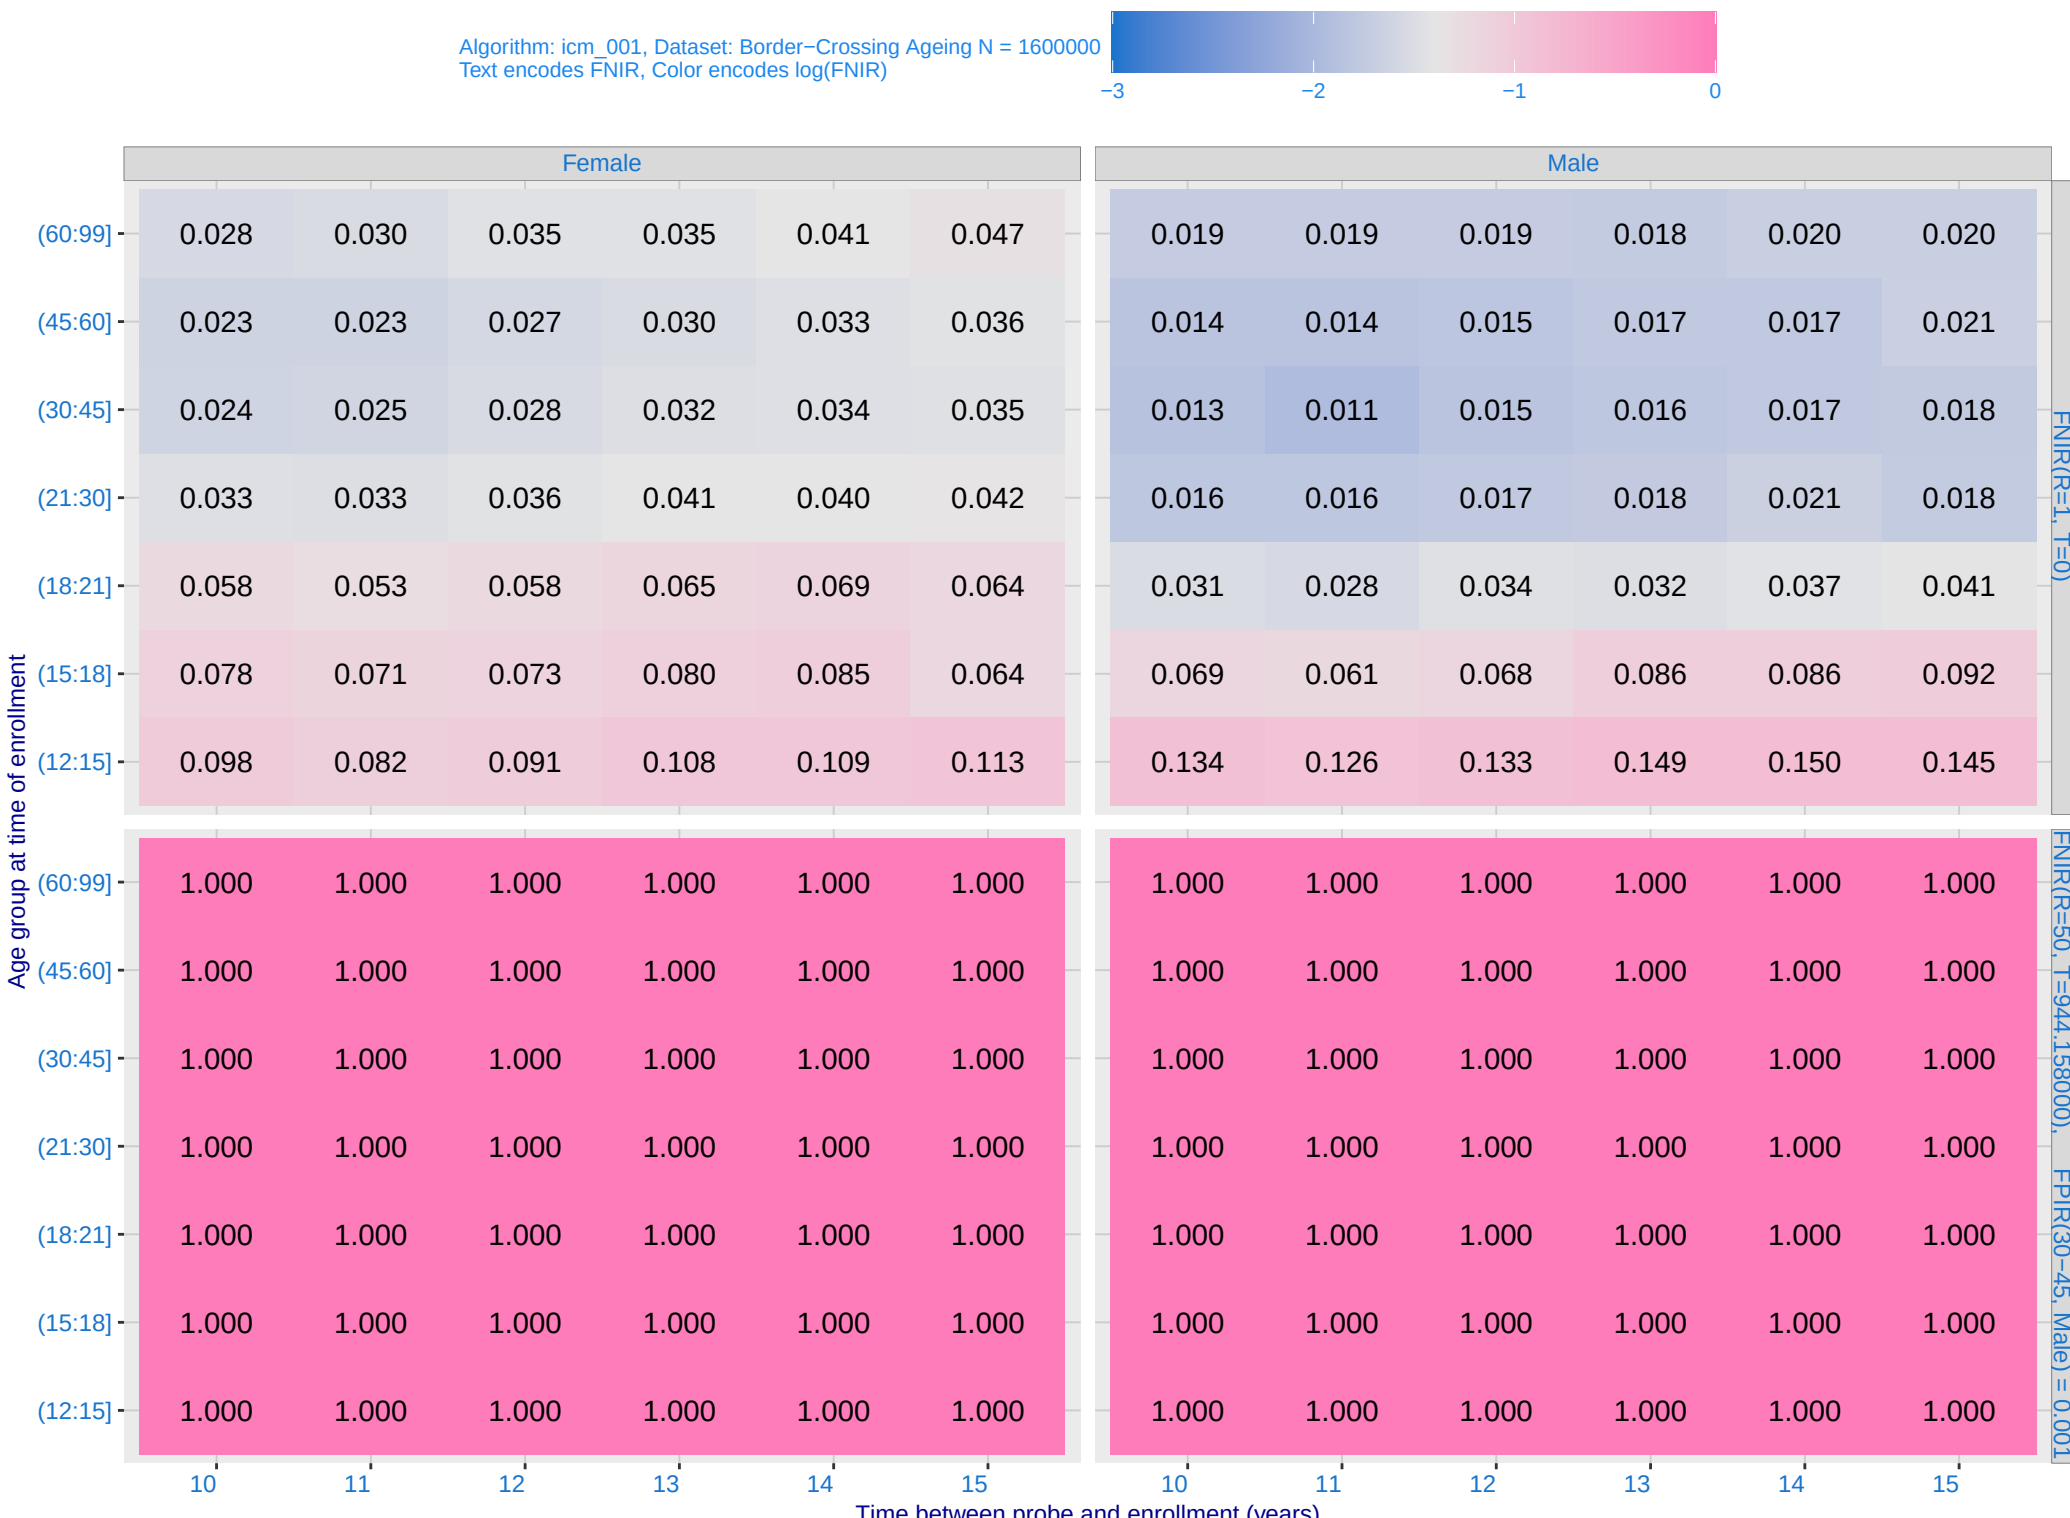

L: Investigational mode: FNIR(1600000, R, 0) by probe type

M: Template duration; search duration vs. N. The blue and pink ribbon covers 95 percent of observed measurements. The template generation time is independent of N. The log and power-law models are fit to the first two (N,T) observations

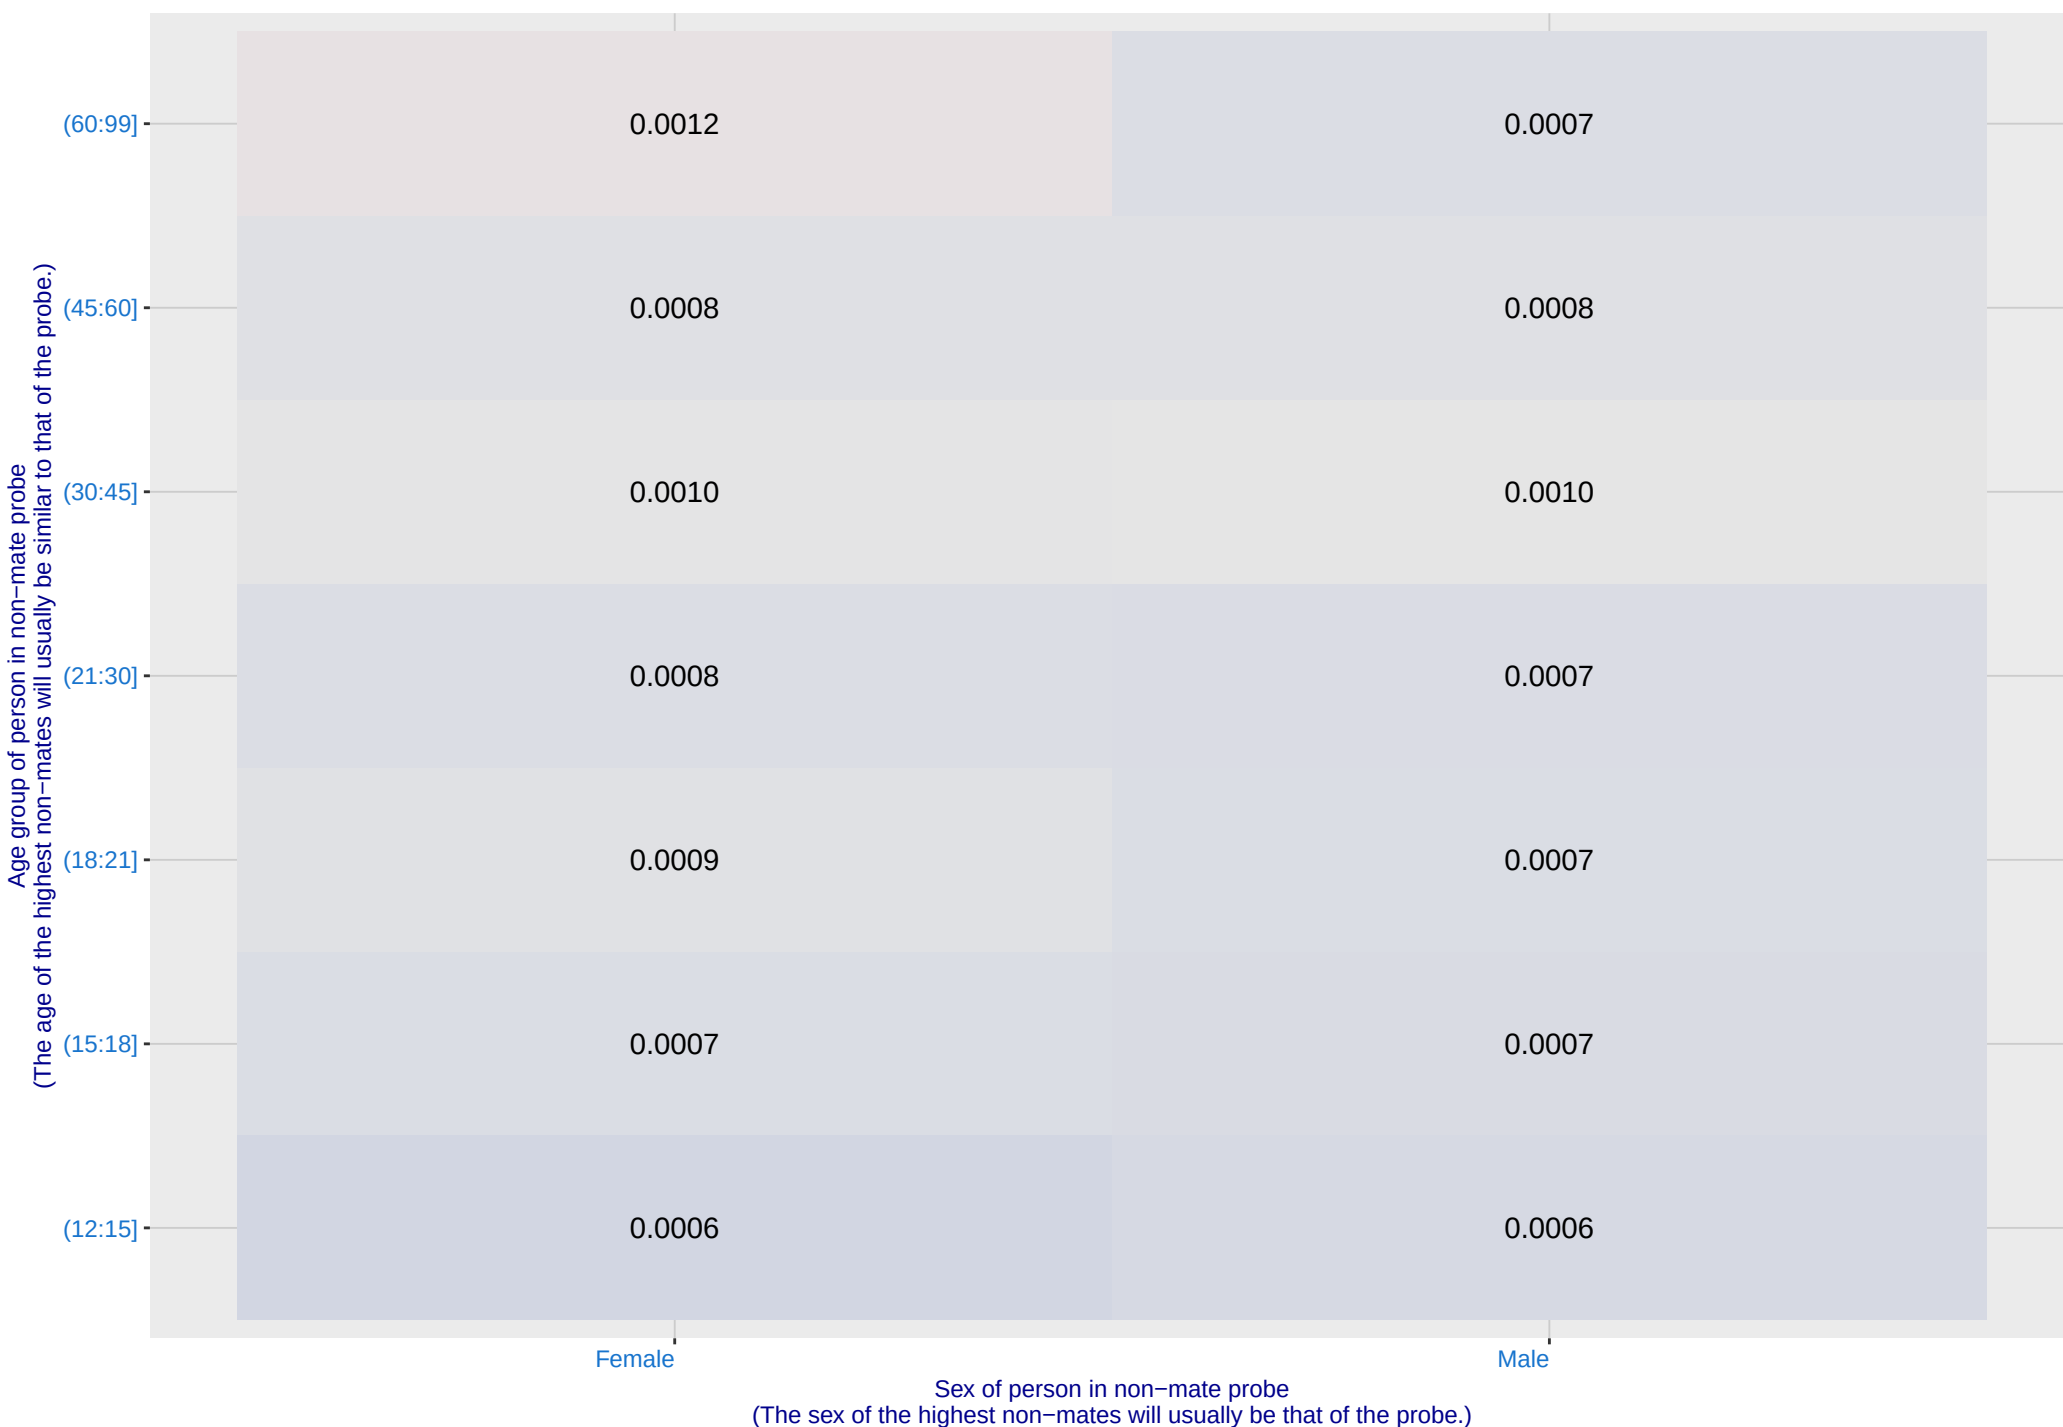

O: FNIR(T, N = 1.6 million) by sex, age and time-lapse. The top row gives investigational rank-1 miss rates. The bottom panels give high threshold for more lights-out identification with low FPIR.

P: FPIR(N = 1.6 million) by sex and age. It is typical for false positive identification rates to be higher in women except in their teens.

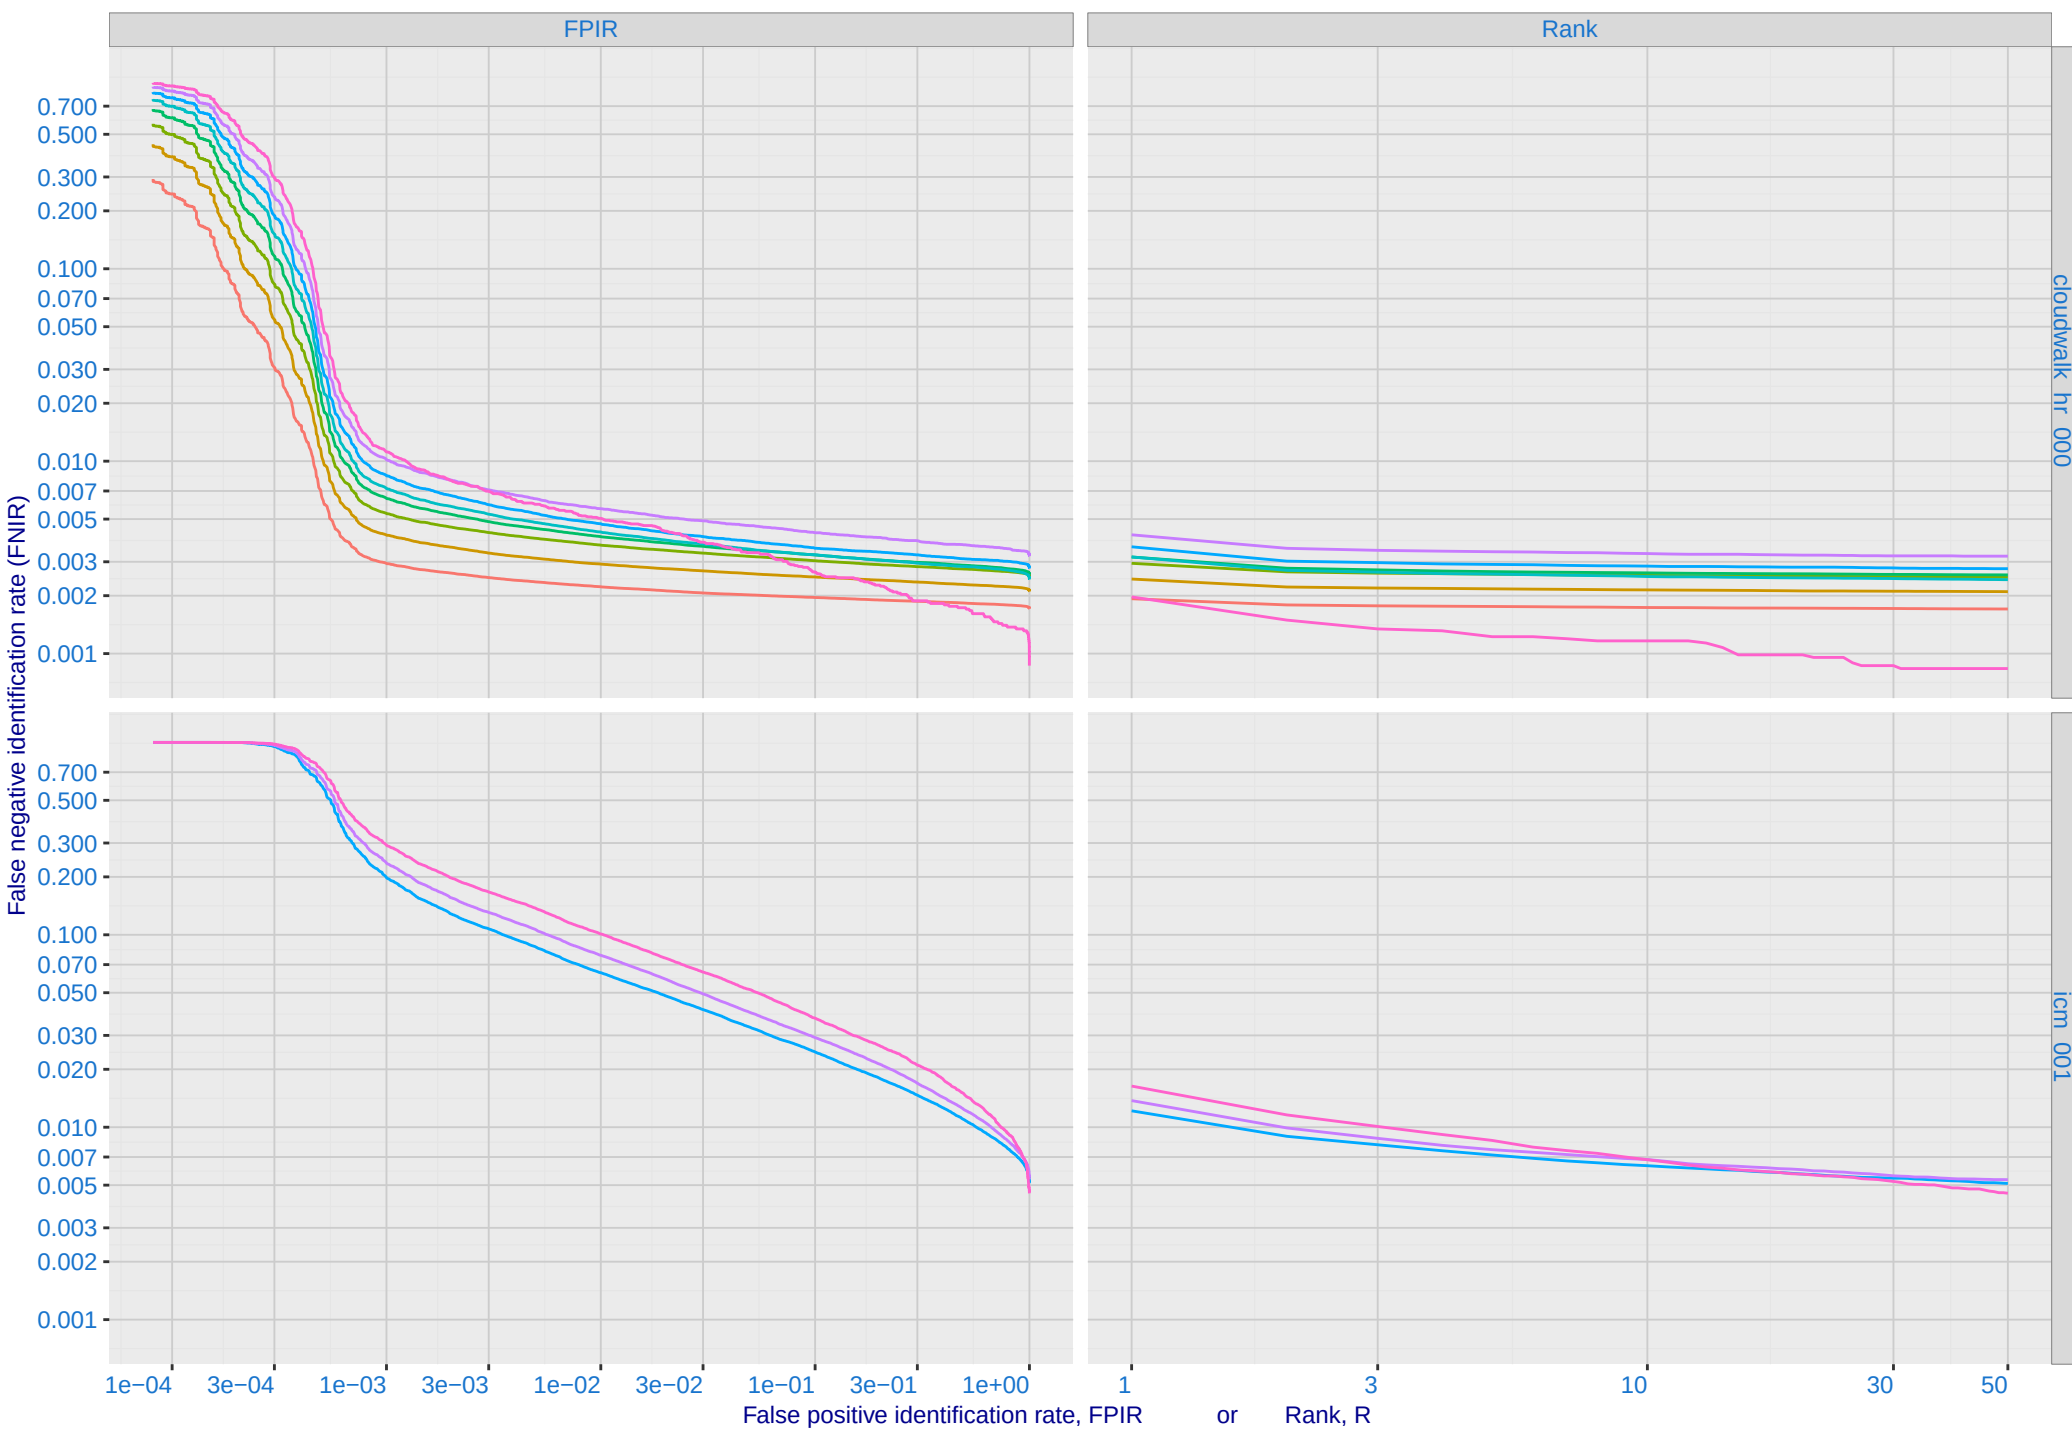

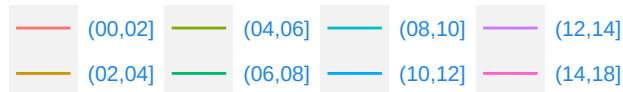

Algorithm: icm_001, Dataset: Border-Crossing Ageing
Threshold: 944.158000 set to achieve FPIR(30-45, Male) = 0.001

Color encodes log(FPIR)

Q: Identification FNIR(N, T, L+1) and Investigational FNIR(N, 0, R) under ageing

Dataset: 2018 Mugshot N = 3068801

R: Decline of genuine scores with ageing, with some eventually dropping below typical thresholds shown by the horizontal lines
